

UW Environmental Health Research Experience Program

A summer research program for undergraduate students | Sponsored by the National Institute of Environmental Health Sciences

Application deadline: February 15, 2013

www.ehrep.washington.edu or ehug@uw.edu

Research
Experience laboratory work first-hand under the mentorship of leading UW researchers. Explore graduate study options while participating in research activities and instruction. Learn about the dynamic field of environmental and occupational health. Work collaboratively on solving problems such as the effects of pesticides or air pollution.

Environmental Health
Use science education to study how the natural and man-made environment influences human health. Influence the health of present and future generations and support the communities that bear the impact of environmental and occupational problems.

Program Details
This program is for science students considering graduate school who have maintained at least a 3.0 GPA. You must be a US citizen or Permanent Resident to participate.
\$5,200 summer stipend
June 24 - August 23, 2013

Seattle
The Emerald City is the cultural center of the Pacific Northwest and one of the world's most livable cities. Spend a summer in Seattle and discover the unmatched wealth of activities the city offers.

The University of Washington is committed to providing access, equal opportunity and reasonable accommodation in its services, programs, activities, education and employment for individuals with disabilities.
