Draft Syllabus: ENV H 505 – Fundamentals of Environmental and Occupational Toxicology

Spring quarter, 2017; 4 credits

Lectures: Mon Wed Fri 10:30 - 11:20 am in HSB T635

Graduate Student Presentations: Tue 1:30 – 2:20 pm in HSB T530

Instructors: Dr. Terry Kavanagh; email: tjkav@uw.edu (<mailto:tjkav@uw.edu>)

Dr. Evan Gallagher; email: evang3@uw.edu (<mailto:evang3@uw.edu>)

Guest lecturers: Dr. June Spector; email: spectj@uw.edu (<mailto:spectj@uw.edu>)

Dr. Marilyn Roberts; email: marilynr@u.washington.edu (<mailto:marilynr@u.washington.edu>)

Mr. Christopher Schaupp; email: cschaupp@uw.edu (<mailto:cschaupp@uw.edu>)

Appointments with Drs. Kavanagh and Gallagher by arrangement only.

-

Course Description

Basic principles governing the behavior and effects of environmental contaminants on biological systems, including: toxicity testing; disposition of environmental contaminants in the body; modifiers of response; fate and health effects of environmental contaminants, including damage to major organs (liver, gastrointestinal system, kidney, respiratory system, immune system); neurodegenerative diseases, cancer, birth defects; and risk assessment and government regulation of environmental contaminants in the home, the workplace and the general environment. The focus is on human health impacts of environmental contaminants in a public health context. Additional readings and presentations/discussions provide graduate - level coverage of related issues. Designed for non-toxicology majors.

Learning objectives for ENV H 505

The learning objectives for this course are based on fundamental concepts in the science and practice of toxicology. After having taken this course students will be able to:

- Identify significant figures and seminal events important in the history of toxicology, and the professional disciplines, job classifications and scientific fields occupied by toxicologists.
- Explain the principles of dose-response, including quantal vs. continuous measures of response and the descriptors used to define individual susceptibility to environmental contaminants.
- Discuss the different types of testing paradigms used to evaluate the adverse health effects of contaminants, including tests for acute, subacute and chronic toxicity; the various biochemical and molecular assays used to investigate mechanisms by which they cause injury; and the ethical principles surrounding *in vitro* and *in vivo* testing.

Exam II	25%
Exam III	25%
Class Presentation	25%

Exams will be worth a total of 100 points each.

**(There will be an optional comprehensive final exam. Note that if you turn in the final exam, it will replace the lowest score of your previous three exams, even if it is lower! Thus, turn in the final exam only if you feel confident that you did better on it than your previous worst exam).*

Class presentations (25% of grade): Each student, as part of a group, will have the responsibility of presenting/discussing one presentation during the quarter. There will typically be 2-3 students assigned to that week's topic. The presentation will focus upon a current chemical (or group of chemicals) for which there is controversy regarding a major aspect of its human or environmental health risk. The instructor will provide a suggested list of topics during the first class day of the course. The students have considerable freedom in how they approach the topic. One approach would be for one of the students to provide a 10 to 12 minute introduction to the compound in controversy, including background, sources and magnitude of toxicant exposure, and modes of toxicity. Following the introduction to the compound and topic, student 2 may present an argument supporting that the compound is of low health risk, and a third student provide a case for potentially banning the compound due to an unacceptable level of risk. All students should present a succinct but high-level discussion of these issues based upon the most current scientific literature and allow 5 to 10 minutes for class discussion. The presentation will be evaluated based on the knowledge of the topic and the discussion of points/questions related to journal articles published on this topic. Each presentation will be evaluated by the instructors. Other students in the class are encouraged to submit constructive comments/feedback to the instructors who will then forward them to the presenters. **Students will be required to e-mail electronic copies of their presentation (generally in MS Power Point or PDF format) to Dr. Kavanagh the evening before the presentation. Similarly, if there is a key paper for discussion the student should send PDF files the evening before to Dr. Kavanagh so that he can copy/provide these before class.** The student presentations should be no more than 35 minutes to allow for class discussion. Dr. Kavanagh and/or Guest Lecturers will foster discussion and provide additional context to the issues raised, as needed. All students should participate in weekly discussions of the presented topics.

It is important when citing scientific papers to critically evaluate the methods used for testing any hypothesis associated the paper, and to be critical of potential artifacts or shortfalls to the best of your ability. You may want to discuss in detail one or two tables or figures in a paper that you feel are particularly crucial to the topic, but it is not necessary to discuss in detail every table or figure. A list of some current toxicology-oriented journals is provided below.

Some Suggested Topics for ENV H 505

1. Phthalate ester exposure in utero and developmental outcomes in infants.
2. Bis-phenol A vs. Bis-phenol S: A case of unfortunate substitution?
3. Does Triclosan exposure really lead to diabetes/metabolic syndrome/obesity?
4. Air pollution has been associated with obesity – what could be the mechanism(s)?
5. Traffic related air pollution and chronic neurological diseases.
6. Are prescription drugs released into the environment through wastewater treatment plants an ecological and/or human health hazard? Puget Sound as a local issue!
7. The 2016 Frank Lautenberg Act: Chemical Safety for the 21st Century (Amends the Toxic Substances Control **Act**(TSCA); costs/benefits of the precautionary principle.
8. Nanotechnology and health; risk/benefit analyses

9. Genetics and epigenetics in toxicology; transgenerational effects of chemical exposures...
10. The role of the microbiome in toxicology; influences on human and animal xenobiotic metabolism.

Some general literature review guidelines and suggestions

1. Review papers with the perspective of the level of the current journal, e.g. don't hold a paper in the *Bulletin of Environ Contam* to the same standards as a paper submitted to *Biological Chemistry*.
2. Is the topic of the paper current and relevant to the field of toxicology? Has this work been accomplished elsewhere (i.e. is it original)? This point is critical and may require some diving into the literature to answer the question.
3. Does the paper address a mechanism of toxicity?
4. Is the paper clearly written, well organized and presented? Does it need re-editing?
5. Is it hypothesis driven? If not, is there an implied hypothesis or an objective stated in the paper early on that is clearly evaluated later in the paper?
6. Are the methods current and appropriate to test the hypotheses /objective(s) presented? Can you suggest better experimental approaches?
7. Do the authors indeed measure what they say they're measuring (e.g. is the sample prep and handling appropriate, are the assays optimized and specific for the endpoints of interest, etc.)? What are the chances that the results obtained are due to artifacts (statistical or otherwise)? Do you "believe" the data?
8. Are the statistical analyses appropriate?
9. Are the results presented in a clear and concise manner?
10. Is the discussion section appropriate to the strength of results, or is there too much conjecture?
11. Are the figures of high quality? Are there excess figures in the manuscript, i.e., can the data be better presented in a table? Should certain figures or tables be omitted from the manuscript or perhaps placed in supplementary files?
12. Are the references current or out of date?
13. Does the paper make a significant contribution to the field of toxicology?

-

Course Absence Policies

- It is your responsibility to notify the instructors **by the end of the first week** of any conflicts you may have with the exam schedule.
- There will be no make-up examinations unless approved by the instructor in advance. If a test is missed because of an unexcused absence, it will not be rescheduled. Contact your instructor **prior to or same day** to notify them that you are unable to take the exam.
- Your instructor will then set a date for a makeup exam, contingent on the student showing **as soon as possible** a valid medical note issued by a medical professional on the original exam date. For other reasons (car accident, death in the family etc.), arrange to speak with the instructors to explain the circumstances. Within reason we will expect to be notified prior to or the day of the exam for these instances.
- If you have any concerns about the class, you may contact Dr. Kavanagh by phone or email to arrange a meeting. If you are still not satisfied with the response that you receive, you may contact the DEOHS Department Chair. You may also contact the Graduate School at G -1 Communications Bldg, by phone at (206) 543-5139 or by email at [raan@uw.edu \(mailto:raan@uw.edu\)](mailto:raan@uw.edu).

The University of Washington and Academic Integrity

All written work you submit will be your own. Plagiarism is a serious offense that will be met with an appropriate penalty and the possibility of disciplinary action. Remember to cite your references and do not paraphrase any references you use for writing assignments. Directly quoting a source is acceptable provided that the source is properly attributed.

The University of Washington expects its students "to maintain the highest standards of academic conduct," as per its Statement of Academic Responsibility. Students who plagiarize are not only jeopardizing their grade and losing the opportunity to really learn, but they also are devaluing the work of their fellow classmates and diminishing the reputation of the University of Washington--which can make your degree less valuable.

University of Washington general policy statement

"Admission to the University carries with it the presumption that students will conduct themselves as responsible members of the academic community. As a condition of enrollment, all students assume responsibility to observe standards of conduct that will contribute to the pursuit of academic goals and to the welfare of the academic community. That responsibility includes, but is not limited to: practicing high standards of academic and professional honesty and integrity."

[Reference: WAC 478-120-020 Standards of Conduct (2a): <http://www.washington.edu/admin/rules/policies/WAC/478-120TOC.html>]

Accommodations for Students with Disabilities

Disability Resources for Students (DRS) offers resources and coordinates reasonable accommodations for students with disabilities. Reasonable accommodations are established through an interactive process between you, your instructor(s) and DRS. If you have not yet established services through DRS, but have a temporary or permanent disability that requires accommodations (this can include but not limited to; mental health, attention-related, learning, vision, hearing, physical or health impacts), you are welcome to contact DRS at 206-543-8924 or uwdrs@uw.edu (<mailto:uwdrs@uw.edu>) or disability.uw.edu

Lecture Schedule:

<u>Date</u>	<u>Topic</u>	<u>Reading Assignment</u>
March 27	Introduction/History of Toxicology (Kavanagh)	Chapter 1
March 28	Topic Assignments for Group Presentations	
March 29	Basic Principles of Toxicology (Gallagher)	Chapter 2
March 31	Biological Disposition I-absorption, distribution (Gallagher)	Chapters 5 - 7
April 3	Biological Disposition II - biotransformation (Gallagher)	Chapters 5 - 7
April 4	Group 1 Presentation	
April 5	Biological Disposition III - excretion (Kavanagh)	Chapters 5 - 7
April 7	Factors that Modify Toxic Responses (Kavanagh)	Chapter 3
April 10	Testing Procedures/Types and Routes of Exposure (Kavanagh)	Chapter 2
April 11	Group 2 Presentation	
April 12	Toxicity in Immune System, Liver, and Kidney (Schaupp)	Chapters 12, 13 & 14
April 14	Developmental and Reproductive Toxicology (Kavanagh)	Chapters 10, 20 & 21

April 17 Toxicity in the Nervous System Chapter 16
(Kavanagh)

April 18 Group 3 Presentation

April 19 Basic Processes of Carcinogenesis Chapter 8
(Gallagher)

April 21 Exam I (covers material through April 17)

April 24 Genetic Toxicology Chapter 9
(Kavanagh)

April 25 Group 4 Presentation

April 26 Toxic metals 1 Chapter 23
(Kavanagh)

April 28 Toxic Metals II Chapter 23
(Kavanagh)

May 1 Occupational Toxicology Chapters 24 & 33
(Spector)

May 2 Group 5 Presentation

May 3 Effects of Microbiological Toxins Chapters 26 & 27
(Roberts)

May 5 Monitoring for microbes and antibiotic resistance Handout
(Roberts)

May 8 Air pollution/respiratory system toxicology Chapters 15 & 28
(Kavanagh)

May 9 Group 6 Presentation

May 10 Ecotoxicology Chapter 29
(Gallagher)

May 12 Exam II - (Covers material from April 19 through May 8)

May 15	Pesticides I (Gallagher)	Chapter 22
May 16	Group 7 Presentation	
May 17	Pesticides II (Gallagher)	Chapter 22
May 19	Food Additives & Contaminants (Kavanagh)	Chapter 30
May 22	Drugs as Toxic Substances/Clinical Toxicology (Kavanagh)	Chapter 32
May 23	Group 8 Presentation	
May 24	Regulation of Toxic Chemicals (Kavanagh)	Handout
May 26	Risk Assessment / Risk Management I (Kavanagh)	Chapter 4
May 29	Memorial Day	
May 30	Group 9 Presentation	
May 31	Risk Assessment / Risk Management II (Gallagher)	Chapter 4
June 2	Review, summary, course evaluation (Kavanagh)	
June 5	#Exam III – (Covers material from May 10 through June 2), and Optional Final Exam*	

**(There will be an optional comprehensive final exam. Note that if you turn in the final exam, it will replace the lowest score of your previous three exams, even if it is lower! Thus, turn in the final exam only if you feel confident that you did better on it than your previous worst exam).*

#Time for Exam III and Optional Final Exam is Monday June 5th from 8:30 – 10:20 am, as determined by UW Spring 2017 Final Exam Schedule (<http://www.washington.edu/students/reg/S2017exam.html>)

Schedule for Presentations

Date Group# Suggested Presenters and Topics (TBD)

April 4 1. Turner, Larson

Topic: Vx/Sarin; a Korean connection?

April 11 2. Grant, Soh

Topic: Harmful Algal Blooms and Their Biotoxins: A Growing Public Health Threat

April 18 3. Harrison, Kegley

Topic: Prescription drugs released into the environment through wastewater treatment plants

April 25 4. Jackson, Jaffer

Topic: Atrazine Toxicity - A Story of the Trematode and the "Toad"

May 2 5. Jo, Schmidt

Topic: Bis-phenol A vs Bis-phenol S: A case of regrettable substitution?

May 9 6. Hewett, Henson

Topic: Anti-depressants

May 16 7. Meisner, Min

Topic: Effects of neonicotinoids for human health and environment.

May 23 8. Frisbie, Motz, Gipe

Topic: Fentanyl and derivatives

May 30 9. Barton, Doughty

Topic: Pb in Flint; an update
