EXECUTIVE SUMMARY

While working in the fields, Olivia Tamayo was raped at gunpoint by her supervisor who threatened to kill her husband if she told anyone about it. When she finally gained the courage to report him to her employer, one of the country's largest farming companies, management did not believe her, ignored her complaints and retaliated against her.ⁱ

Similarly, Emeteria Cortes Bustos was raped with shears to her throat by her supervisor who threatened to fire her and kill her siblings if she reported the rapes. He forced her to perform sex in the fields several more times and when she refused, he fired her.ⁱⁱ

These are just two examples of the sexual violence that women farmworkers in the United States must face on a regular basis. As in the military and on university campuses, the tremendous imbalance of power in the agricultural industry creates an atmosphere where sexual violence is common. A recent community study found approximately 80 percent of women farmworkers they spoke to claimed they experienced some form of sexual violence on the job.ⁱⁱⁱ In comparison, roughly 25-50 percent of all women in the workforce have experienced at least one incident of sexual violence^{iv} and approximately 1 in 5 women in the United States has been raped in her lifetime.^v

While sexual violence in the workplace has been studied extensively, far less attention has been given to the issue as it applies to women farmworkers in the United States whose circumstances differ greatly from the white middle-class focus of most sexual violence literature. Few research studies of this population have been conducted and the literature that exists has not yet been consolidated. The purpose of this report is to provide a comprehensive review of the existing documentation of sexual violence against women farmworkers who harvest and pack agricultural goods, the factors in agriculture that heighten their risk and the challenges of finding effective solutions.

A significant challenge to addressing the issue is the difficulty in gathering data about this population because of the seasonal, migrant and temporary nature of agricultural work and the largely unauthorized worker population.^{vi} The most current estimates gauge the number of workers employed in the agricultural industry at over 2.1 million^{vii} and the number of crop workers at approximately 1.4 million.^{viii} It is estimated that approximately 78 percent of farmworkers are foreign-born, of which 75 percent were born in Mexico.^{ix} Fifteen percent of farmworkers reported being indigenous in a national study,^x and smaller studies have found 20-30 percent of a state's farmworker population belonged to a particular indigenous group.^{xi} While foreign-born workers may be authorized to work in the United States under various visa categories, the national study estimated that at least 53 percent of the hired crop labor force lacked such work authorization.^{xii} The numbers are likely much higher and other reports estimate 60-75 percent of the farmworker population is undocumented.^{xiii} Most farmworkers have little formal education, low literacy rates and do not speak English.

Women are far outnumbered by men in the agricultural industry and constitute an estimated 20-25 percent of the total farmworker population.^{xiv} Studies have found that in such a heavily male-dominated workforce, sexual violence of women is widespread. Reliable figures about its prevalence, however, are very difficult to acquire for several reasons. The first is that few women file reports. While approximately 41 percent of women industry-wide report abuse to their employers or the police,^{xv} only 6.6 percent of Latinas who experienced sexual assault contacted police and only 21 percent sought any type of formal help such as medical care, police involvement, social services, restraining orders or criminal charges.^{xvi} In addition to low reporting rates, those incidences that are reported are seldom investigated or prosecuted.^{xvii}

Furthermore, one of the most significant challenges to addressing the issue is the difficulty in gathering data about the scope of the problem for this population. Women farmworkers face very different fears and obstacles to reporting and seeking support and remedies for abuse than do workers in other industries, making traditional research methods ineffective.

In one study, 80 percent of women farmworkers said they have experienced some form of sexual violence on the job.

Several qualitative studies conducted from the late 1980s through today have recognized sexual violence against women farmworkers as a pervasive problem and discovered a wide range of severity, from verbal abuse to rape. A recent study found that 97 percent of women who reported sexual violence experienced gender harassment from supervisors and coworkers (which includes generalized sexist comments and behaviour that convey insulting, degrading, and sexist attitudes), 53 percent experienced unwanted sexual attention (ranging from unwanted and offensive physical or verbal sexual advances to gross sexual imposition, assault, or rape) and 24 percent experienced sexual coercion (i.e., the solicitation or coercion of sexual activity by promise of reward or threat of punishment).^{xviii}

The agricultural industry presents unique risks for women farmworkers that increase the likelihood of sexual violence. The physical environment of farm work is often remote, offering perpetrators opportunities to conceal their behavior. The nature of the work requires women to bend over and crouch, placing them in vulnerable physical positions as they work in close proximity to men. The workforce is commonly made up of family relations, friends and neighbors, blurring the line between work life and family life, which increases the risk of sexual violence and deters women from reporting abuse. For example, the perpetrator may be close friends with the woman's family members or she may work with his wife, creating a ripple effect of social impacts if she were to report his abuse.

Figure 1 Women farmworkers face particular conditions that make them vulnerable to sexual violence, including isolation, physical positions, and perpetrators with the power to hire and fire.

Furthermore, the power dynamic between supervisors and low-wage immigrant women farmworkers drastically increases the likelihood of rampant sexual violence. Most perpetrators are in power positions with the authority to hire, fire or give benefits to workers such as better hours and task assignments.^{xxix} Supervisors usually speak English and therefore often act as the communication link between non-English speaking workers and authorities.^{xxx} Harassers also often have lawful immigration status, giving them power over unauthorized workers to threaten calling immigration authorities for reporting sexual violence.^{xxxi} Additionally, workers often depend on their employers for housing and transportation^{xxvii} and some foremen are related to the growers or owners, making it even harder for women to stop the abuse.^{xxviii} Sexual violence in agricultural differs from that in other industries in the high level of violence that is involved as many supervisors and owners carry guns and a perpetrator may threaten to kill a woman's family members who live here or back in her home country through recruiters if she reports him.^{xxix}

Moreover, the agricultural industry is excluded from many of the major labor laws and those that do apply are regularly violated, leaving farmworkers without basic workplace protections.^{xxv} Although Title VII of the Civil Rights Act of 1964 theoretically protects all workers, including unauthorized workers, from sexual violence,^{xxvi} it is often unable to provide women farmworkers with meaningful protections because it fails to address the combination of discrimination factors they face.^{xxvii}

Women farmworkers face simultaneous sexist, racist, economic, and political discrimination, making them the most vulnerable, easily exploitable and dispensable workers in the United States.^{xxviii} Latino cultural beliefs about gender norms likely play a significant role in the prevalence of sexual violence in the agricultural industry. *Machismo* values define separate roles for men and women; however, "the need for economic stability has forced many Latinas in the US to work alongside men to support their families, which has in turn challenged traditional

gender norms.^{xxix} Immigrant women who were socialized in their home countries to be subservient to men are often reluctant or afraid to speak up against their male harassers and stay silent about the injustices committed against them.^{xxx} Their economic instability further heightens their susceptibility for sexual violence as farmworkers in the United States are among the poorest of the working poor with over 60 percent of farmworker households living in poverty^{xxxi} and women making significantly less than their male counterparts.^{xxxii} A recent study found that the average personal yearly income of female crop workers was \$11,250, far less than male crop workers who averaged \$16,250.^{xxxiii} Poverty and fear of job loss have been identified as key reasons why women farmworkers often do not report sexual violence at work.^{xxxiv}

Figure 2 Women farmworkers use a variety of coping strategies to prevent abuse, including bandanas to hide their faces and layers of clothing to hide their bodies.

Immigrant-related discrimination and fear of deportation also severely deter women farmworkers from reporting sexual violence or seeking help from police, rape crisis shelters, counseling programs and the courts.^{xxxv} Unauthorized workers often feel virtually powerless to report abuse for fear they will lose their jobs, be deported and separated from their children and families.^{xxxvi} Their distrust of police and fear of being deported after reporting sexual assault is well-founded as law enforcement personnel in many areas of the country collaborate directly with immigration authorities under federal programs such as 287(g)^{xxxvii} and Secure Communities.^{xxxviii} Language barriers also put these women at greater risk of exploitation and make them less likely to report abuse. Thus, many women farmworkers suffer in silence, viewing the sexual abuse as a burden they must bear to remain in the country.^{xxxix} The combination of the many problems women farmworkers face (being female in a male-dominated industry, living in poverty, language barriers, being an immigrant, being an indigenous immigrant and oftentimes lacking work authorization) heighten the risk of sexual violence and must all be taken into account as interrelated in defining the oppression faced by these workers and finding effective solutions.^{xl}

Numerous studies have shown that sexual violence can cause physical and psychological damage such as post-traumatic stress disorder, depression, anxiety, flashbacks,

fear of being raped in the future, being afraid to go to work because of fear of facing more harassment, anger, guilt, shame, self-blame, low self-esteem, eating disorders, substance abuse and suicidal attempts.^{xli} Sexual violence not only impacts the survivor, but her family often suffers psychological and social effects as well as they may need to move to escape the violence and must witness the pain their mother or spouse experiences.^{xlii} Sexual violence in the workplace can also disrupt social dynamics and negatively impact women's support systems. Women who choose to report abuse or seek help from the justice system or social services may be socially ostracized, isolated and denied support from the very community they need most.^{xliii} Widespread sexual violence also affects women farmworkers' attitudes towards their jobs as they perceive organizational tolerance for the abuse and feel dissatisfied with their jobs, coworkers and supervisors.^{xliv} In addition, women who choose to report abuse often face retaliation from their employer, supervisors, family and community.

Women farmworkers use a myriad of strategies to try to prevent being targeted at work and to cope with the abuse they have suffered. For example, many wear baggy clothing and cover their faces with bandanas to look less feminine. Few women report the abuse to authorities and most rely on informal support systems before/if they seek any formal assistance. The decision of whether to report the abuse or not is based on several factors including fear of not being believed, fear of being blamed, fear of being ostracized at work and in her community for accusing the harasser of such terrible actions (especially if the harasser is a family friend), fear of losing her job, shame, lack of information about worker rights, lack of available support resources, language barriers and fear of deportation.^{xlv} Despite continuous harassment, most women cope on their own by either putting up with the abuse or quitting their jobs.^{xlvi}

Cultural attitudes about sexual violence and the role of the legal system may influence women farmworker's coping mechanisms. Immigrant women farmworkers may be skeptical that the United States legal system will provide her protection and instead view it as "an entity that will believe and protect the perpetrator."^{xlvii} This is particularly true if her experience in her country of origin involved a repressive government, institutionalized gender bias, participation of police and government officials in violence against women such as trafficking or rape, or "a legal system where, as a matter of law, a husband's sexual assault of his wife is not unlawful, where a woman's testimony is not considered valid evidence, or her word does not have the evidentiary weight of a man's."^{xlviii} Her skepticism is often further reinforced by her lack of access to and negative experiences with police and service providers in the United States who fail to investigate her report, discriminate against her or fail to address her cultural needs.^{xlix}

However, delays in reporting incidences of sexual violence to employers or law enforcement can have significant implications for a woman's ability to access timely medical, legal and mental health assistance.ⁱ While many social services exist for survivors of sexual assault, access may be limited for women farmworkers as few exist in rural areas and those that do often have language barriers to providing immigrant women the services they need.ⁱⁱ

Women farmworkers also face numerous obstacles to accessing justice for the sexual violence they have experienced on the job. Sexual harassment policies and training are not required in the agricultural industry by federal law,ⁱⁱⁱ resulting in most agricultural employers

lacking adequate protections.^{lvi} Additionally, low-income women farmworkers have limited access to legal assistance as legal service organizations that receive federal funding from the Legal Services Corporation (LSC) are generally prohibited from representing unauthorized immigrants.^{lv} Although some remedies are available through civil litigation, very few criminal charges have been prosecuted against perpetrators of sexual violence in the agricultural industry.^{lv} Thus, with few exceptions, perpetrators get off without many consequences.

Figure 3 Perpetrators of sexual violence against women farmworkers seldom face consequences for their actions. Employers and law enforcement agencies rarely investigate or prosecute. The women themselves have limited access to legal assistance, and often do not know or understand their rights.

On the bright side, legislators, advocates, law enforcement, farmworker women themselves, community organizations, academic institutions and growers are creating new ways to combat sexual violence in the agricultural industry. At the federal level, legislators have created the Violence Against Women Act (VAWA), U visas and T visas to encourage unauthorized immigrants to report crimes such as sexual assault. Several states are also passing legislation that creates stronger legal protections against sexual harassment and exploitation of workers. A growing number of states and counties are also ending or limiting their cooperation with immigration authorities under the 287(g) and Secure Communities programs and some local law enforcement agencies are beginning to investigate farmworker sexual assault criminal charges. Additionally, numerous organizations around the country are working together to improve employer standards, increase and improve sexual harassment policies and training, raise awareness of sexual violence in agriculture and educate workers about their rights.

In conclusion, the studies reviewed in this report suggest that sexual violence is a longstanding and pervasive norm in the agricultural industry. The social and cultural dynamics of the farmworker population create unique obstacles for women farmworkers to report and seek support and remedies for sexual violence in the workplace. Researchers must develop alternatives to traditional data collection methods in order to gather accurate data about workplace sexual violence of women farmworkers. Without reliable figures, determining the

prevalence of sexual violence in agriculture is difficult. The lack of adequate data hides farmworkers from public attention and hampers efforts to raise awareness about the serious problems these women face.^{1vi}

DEFINITIONS

Agriculture: In using the term “agriculture,” this report refers to crop production, which includes harvesting and packing industries.^{lvi} The report also discusses meat packing plants because workers in these environments face similar sexual violence problems as those working in crop production.

Farmworker: The Bureau of Labor Statistics defines “farmworkers” as those who “manually plant, cultivate, and harvest vegetables, fruits, nuts, horticultural specialties, and field crops. Use hand tools, such as shovels, trowels, hoes, tampers, pruning hooks, shears, and knives. Duties may include tilling soil and applying fertilizers; transplanting, weeding, thinning, or pruning crops; applying pesticides; or cleaning, grading, sorting, packing, and loading harvested products. May construct trellises, repair fences and farm buildings, or participate in irrigation activities.”^{lvii} This report uses an expansive definition of “farmworker” that also includes people who pack and process agricultural products in off-farm facilities.

Migrant Farmworker: “Migrant farmworkers” are those farmworkers who leave their permanent residence to work for months at a time in agriculture.^{lx}

Seasonal Farmworker: “Seasonal farmworkers” are those farmworkers who work temporarily, or seasonally, but return to their permanent residence after work each day.^{lx}

Immigrant: The term “immigrant” will be used in this report to include both documented and undocumented refugees, migrants and others present in the United States with or without temporary or permanent visas.^{lxii}

Unauthorized Immigrant: The term “unauthorized” refers to people currently living in the United States without permission from the Department of Homeland Security (formerly the Immigration and Naturalization Service). Their unauthorized presence could result from a visa violation or from unlawful entry.^{lxiii}

Indigenous Farmworker: “Indigenous farmworkers” are “farmworkers from pre-Columbian communities that are mostly self-governing and speak an indigenous language as their primary language.”^{lxiv}

Sexual Violence and Sexual Harassment: As defined by the Centers for Disease Control and Prevention, “sexual violence” is “any sexual act that is perpetrated against someone’s will... including a completed non-consensual sex act (i.e., rape), an attempted non-consensual sex act, abusive sexual contact (i.e., unwanted touching), and non-contact sexual abuse (e.g., threatened sexual violence, exhibitionism, verbal sexual harassment).”^{lxv}

“Sexual harassment,” a violation of Title VII of the Civil Rights Act of 1964, is defined as “unwelcome sexual advances, requests for sexual favors, and other verbal or physical harassment of a sexual nature.”^{lxv} The Equal Employment Opportunity Commission (EEOC), a federal agency charged with enforcing Title VII and other workplace anti-discrimination laws,

explains that “harassment is illegal when it is so frequent or severe that it creates a hostile or offensive work environment or when it results in an adverse employment decision (such as the victim being fired or demoted). The harasser can be the victim's supervisor, a supervisor in another area, a co-worker, or someone who is not an employee of the employer, such as a client or customer.”^{lxvi}

As the Southern Poverty Law Center noted in *Representing Farmworker Women Who Have Been Sexually Harassed – A Best Practices Manual*, “[s]exual harassment in the workplace is a form of sexual violence.”^{lxvii} Like the World Health Organization, this report uses the term sexual violence to encompass “acts that range from verbal harassment to forced penetration, and an array of types of coercion, from social pressure and intimidation to physical force.”^{lxviii}

INTRODUCTION

Olivia's Story

While working in the fields, Olivia Tamayo was raped at gunpoint by her supervisor who threatened to kill her husband if she told anyone about it. When she finally gained the courage to report him to her employer, one of the country's largest farming companies, management did not believe her, ignored her complaints and retaliated against her.*

* EEOC v. Harris Farms, 274 F. App'x 511 (9th Cir. 2008)

PURPOSE OF REPORT

While sexual violence against women farmworkers is recognized as a widespread problem, few research studies have been conducted on the issue, and the literature that exists has not yet been consolidated. The purpose of this report is to provide a comprehensive review of the existing documentation of sexual violence against women farmworkers who harvest and pack agricultural goods, the factors in agriculture that heighten their risk, and the challenges of finding effective solutions. Although men and transgender farmworkers also experience sexual violence, this report focuses on the impact on women, for whom the prevalence of abuse is reportedly higher.^{lxix}

METHODOLOGY AND MATERIALS

Included in this review of sexual violence in the United States agricultural industry are peer-reviewed published literature, organization reports, survey polls, videos, media, educational materials, litigation guides, landmark lawsuits, guidebooks for service providers and training materials, produced between 1989 and 2014 using the following sources: PubMed, LexisNexis and Oxfam's organizational and individual networks. Reports and materials meeting the following criteria were prioritized:

- Demonstrates the severity (physical, emotional, social, occupational) of the problem
- Describes the effects that sexual violence in agriculture has on the survivor, the perpetrator, the company and the industry
- Presents the methods used (if a research study)

BACKGROUND

The unique aspects of the agricultural industry as well as the social and cultural dynamics of the farmworker population must be examined in order to understand the scope of the sexual violence problem and how to develop effective solutions for these women. A significant challenge to addressing the issue, however, is the difficulty in gathering data about this population. Reliable figures are hard to determine because of the seasonal, migrant and temporary nature of agricultural work and the largely unauthorized worker population.^{lxix}

The main national surveys that collect data on agricultural farmworkers are the National Agricultural Workers Survey (NAWS), the United States Department of Agriculture's (USDA) Census of Agriculture (Census), the USDA's National Agricultural Statistics Survey (NSSS) and the Bureau of Labor Statistics Current Population Study (CPS). Each survey has significant limitations such as the underestimation of farmworkers due to the exclusion of small farms, counting jobs instead of workers when two or three workers may fill one job, and the unlikely inclusion of the largely unauthorized worker population from official data. In addition, agricultural employers are dis-incentivized to report accurate labor information as they want to avoid bringing attention to illegal employment arrangements or unsafe workplace practices. Some federal agencies collect information on regulatory and enforcement practices, however this information is usually not easily accessed. States collect and publish information through their regulatory programs and departments, but the information is often specific to that state's unique regulations, reporting criteria and definitions, making it difficult to compare data between states. Farmworker organizations and academics have also contributed to the data collection, however these studies are often limited as well.^{lxxi} Most importantly, no federal agency tracks the number of sexual harassment incidents in agriculture. "Aside from the estimates of female 'hired farmworkers' and the increase in the number of women coming to this country in search of work (without a corresponding increase in the number of women working in agriculture), there is no other information providing evidence of sex discrimination in agricultural labor."^{lxxii}

The most current estimates gauge the number of workers employed in the agricultural industry at over 2.1 million^{lxxiii} and the number of crop workers at approximately 1.4 million.^{lxxiv} Other estimates of the national farmworker population range from approximately 1 million to over 3 million.^{lxxv} The six states with the largest farmworker populations are California, followed by Florida, Washington, Texas, Oregon and North Carolina.^{lxxvi}

Many agricultural companies actively target immigrant communities and recruit workers from outside of the United States.^{lxxvii} The NAWS, last updated in 2010, reported that 78 percent of farmworkers were foreign-born, of which 75 percent were born in Mexico.^{lxxviii} The percentage of indigenous farmworkers is particularly difficult to estimate as few studies have focused on this population and many farmworkers report Spanish as their native language on the NAWS, regardless of their actual mother tongue.^{lxxix} Fifteen percent of farmworkers reported being indigenous on the 2007-2009 NAWS,^{lxxx} and smaller studies have found 20-30 percent of a state's farmworker population belonged to a particular indigenous group.^{lxxxi} While foreign-born workers may be authorized to work in the United States under various visa categories, the report estimated that approximately 53 percent of the hired crop labor force lacked such work

authorization.^{lxxxii} The numbers are likely much higher and other reports estimate 60-75 percent of the farmworker population is undocumented.^{lxxxiii} However, this figure is likely higher as the NAWS relies only on employers who agree to be interviewed.^{lxxxiv}

Most farmworkers have little formal education, low literacy rates and do not speak English. On average, foreign-born workers highest completed grade level is the sixth grade.^{lxxxv} A California report found that only 15 percent of farmworkers in the state were “considered more than ‘marginally literate,’ in terms of reading and writing in their own language.”^{lxxxvi} Spanish is the predominant language of over 80 percent of farmworkers.^{lxxxvii} Only 24 percent of farmworkers claim to speak English well and 44 percent report they cannot speak English at all.^{lxxxviii} Female farmworkers are much less likely than their male counterparts to speak English.^{lxxxix}

Women are far outnumbered by men in the agricultural industry and constitute an estimated 20-25 percent of the total farmworker population.^{xc} In such a heavily male-dominated workforce, sexual violence against women is widespread. A recent community study found approximately 80 percent of women farmworkers they spoke to claimed they experienced some form of sexual violence on the job.^{xcii} In comparison, roughly 25-50 percent of all women in the workforce have experienced at least one incident of sexual violence^{xcii} and approximately 1 in 5 women in the United States has been raped in her lifetime.^{xciii}

Women account for 20-25 percent of the farmworker population. In a male-dominated workforce, sexual violence against women is widespread.

Although it has been recognized that sexual violence is widespread in the agricultural industry, reliable figures about its prevalence are very difficult to acquire for several reasons. The first is that few women file reports. According to the Bureau of Justice Statistics, only 41 percent of women industry-wide who have been sexually assaulted or raped report it to the police.^{xciv} Likewise, approximately 41 percent of women who have been sexual harassed report the incident to their employers.^{xcv} Reporting rates are even lower in Latino communities where, according to a 2010 study, only 6.6 percent of Latinas who experienced sexual assault, attempted sexual assault or fondling/forced touching said they contacted police and only 21 percent said they sought any type of formal help such as medical care, police involvement, social services, restraining orders or criminal charges.^{xcvi} Several other studies have found similar low rates of reporting, particularly for low-income and immigrant women.^{xcvii} In addition to low reporting rates, those incidences that are reported are seldom investigated or prosecuted.^{xcviii}

One of the most significant challenges to addressing the issue of sexual violence against women farmworkers is the dearth in research quantifying the problem. This population faces very different fears and obstacles to reporting and seeking support and remedies for abuse than do workers in other industries, making traditional research methods ineffective. For instance, researchers often gather data by looking at workers’ compensation reports. This method would come up empty handed in the agricultural industry as most farmworkers do not have access to workers’ compensation.^{xcix} The lack of government regulation in the agricultural industry^c impedes research on the issue. Additionally, the studies discussed in this report gathered data

by interviewing women in their communities instead of the workplace because of the dangers of retaliation and threats of deportation if sampling took place in the workplace. However, due to the seasonal and migrant nature of farm work, community studies are not necessarily representative of the worker population at the time data is collected. Researchers must address these limitations and examine alternatives to traditional methods in order to develop a rigorous research design to collect data about workplace sexual violence against women farmworkers.

In one study, 6.6 percent of Latinas who experienced sexual assault contacted the police; 21 percent sought some type of formal help (e.g., medical care, social services).

FORMS OF WORKPLACE SEXUAL VIOLENCE

SEXUAL VIOLENCE RANGES FROM VERBAL ABUSE TO RAPE

Sexual violence against women farmworkers has been recognized as a widespread problem by several studies conducted from the late 1980s through today. As part of her master's thesis in Psychology at California State University, Long Beach, Maria Elena Lopez-Trevino was one of the first to survey women farmworkers about the issues they face. Her survey revealed that in 1993, approximately 90 percent of the women interviewed reported sexual violence as a major problem in the workplace. Only 10 percent of the respondents, however, admitted they had been sexually harassed themselves at work by a foreman or coworker. Lopez-Trevino noted that the low 10 percent reporting rate reflected the "reluctance of women [farmworkers] to report less severe forms of sexual harassment."^{cii} In more recent studies, researchers have inquired further into the various forms of violence these women face and discovered dramatically increased rates of women farmworkers claiming they have experienced sexual violence at work.

Irma Morales Waugh, of the Department of Psychology at the University of California, Santa Cruz, conducted a 2010 study of 150 Mexican women farmworkers on California farms that found 80 percent of the interviewees experienced some form of sexual violence on the job.^{ciii} Waugh used three categories of sexual violence defined by researchers Cortina^{ciii} and Fitzgerald and her colleagues:^{civ} "(a) gender harassment, which includes generalized sexist comments and behavior that convey insulting, degrading, and sexist attitudes; (b) unwanted sexual attention ranging from unwanted, inappropriate and offensive physical or verbal sexual advances to gross sexual imposition, assault, or rape; and (c) sexual coercion (i.e., the solicitation or coercion of sexual activity by promise of reward or threat of punishment)"^{civ} by a superior with power over a subordinate's employment. The study found that 97 percent of women who reported sexual violence experienced gender harassment from supervisors and coworkers, 53 percent experienced unwanted sexual attention and 24 percent experienced sexual coercion.^{cvi}

In 2012, Human Rights Watch produced a report, *Cultivating Fear*, after conducting 160 interviews with farmworkers, growers, law enforcement officials, attorneys, service providers and other agricultural workplace experts in 8 states.^{cvi} The study categorized the various forms of sexual violence slightly differently than did Waugh, differentiating between (a) long-term harassment, ranging from repeated obscene comments and gestures to routine propositions for sex by supervisors, (b) unwanted touching, verbal abuse and exhibitionism, and (c) rape and other forms of coercive sexual conduct. The study found nearly all 52 farmworkers interviewed experienced one or more of these forms of sexual violence on the job or knew someone who did

and that unwanted touching, verbal abuse and exhibitionism was the category most commonly reported.^{cvi}

As part of her master's thesis in Public Health at University of Washington School of Public Health, Nicole Kim conducted a study in 2014 of 20 Spanish-speaking women agricultural workers in Yakima Valley, Washington. The study found that 75 percent shared personal or peers' stories of sexual violence at work. The most common form of sexual violence reported was unwanted verbal comments, followed by physical grabbing and then staring. Some women reported coercion by harassers who offered better hours in exchange for sexual favors or threatened termination if the women refused.^{cix}

Sexual violence studies have also been conducted with women working in meatpacking plants. In 2009, the legal research and advocacy group ASISTA surveyed more than 100 women in Iowa meatpacking plants, finding that 84 percent reported experiencing one or more types of sexual violence at work. Fifty-six percent of the women said coworkers or bosses made comments about their bodies, 41 percent said they experienced unwanted physical contact at work, 30 percent said they were propositioned for sex at work and 26 percent said they were threatened with being fired or demoted if they resisted their bosses' or coworkers' advances.^{cx}

While investigating sexual violence against women farmworkers in California, EEOC staff discovered that "hundreds, if not thousands, of women had to have sex with supervisors to get or keep jobs and/or put up with a constant barrage of grabbing and touching and propositions for sex by supervisors. A worker from Salinas, California eventually told us that farmworkers referred to one company's field as the *field de calzon*, or 'field of panties,' because so many supervisors raped women there."^{cxi} Many of the cases that the EEOC has litigated on behalf of women farmworkers involve allegations of inappropriate sexual comments, propositions for sex, coercion by hiring officials offering job opportunities contingent upon engaging in sex, rape, repeated rapes, rapes involving weapons such as guns or sharp objects like gardening shears held at the victim's throat, and threats to terminate the woman's job or kill her husband, children, or other family members if she refused.^{cxii}

Farmworkers refer to a field in Salinas, CA as *the field de calzon* (field of panties) because so many supervisors take women there to rape them.

Although far fewer studies have examined the prevalence of sexual violence against women farmworkers than have focused on white middle-class women, the findings gathered suggest that sexual violence is a longstanding, pervasive and frequent norm in the agricultural industry.^{cxiii}

STRUCTURE OF THE AGRICULTURE INDUSTRY

FACTORS THAT HEIGHTEN THE RISK OF SEXUAL VIOLENCE IN THE FIELDS AND PROCESSING PLANTS

The agricultural industry presents unique risks for women farmworkers that increase the likelihood of sexual violence. The physical environment of farm work is often remote, offering harassers opportunities to conceal their behavior. The nature of the work requires women to bend over and crouch, placing them in vulnerable physical positions as they work in close proximity to men. The workforce is commonly made up of family relations, friends and neighbors, blurring the line between work life and family life, which increases the risk of sexual violence and deters women from reporting abuse. Furthermore, like the imbalance of power in the military and on university campuses, the power dynamic between supervisors and low-wage immigrant women farmworkers drastically increases the likelihood of rampant abuse.^{cxiv} Sexual violence in agricultural also differs from that in other industries in the high level of violence that is involved.

In addition, the agricultural industry is excluded from many of the major labor laws and those that do apply are regularly violated, leaving farmworkers without basic workplace protections.^{cxv} Although Title VII of the Civil Rights Act of 1964 theoretically protects all workers, including unauthorized workers, from sexual violence,^{cxvi} it is often unable to provide women farmworkers with meaningful protections because it fails to address the combination of discrimination factors they face.^{cxvii}

PHYSICAL ENVIRONMENT

The physical environment of agricultural work presents unique risks for women farmworkers, heightening their susceptibility for sexual abuse. Many women work in remote, isolated or concealing environments, hidden by leafy bushes and plants, where they may not be able to protect themselves from harassers or call for help.^{cxviii} For example, in orchards, harassers can often grab and touch women farmworkers without anyone else seeing their behavior.^{cix} In the fields, foremen often separate women workers from their husbands and coworkers, leaving them to work alone in isolated areas where the foreman can sexually harass or assault her.^{cxx}

Employee housing in the agricultural industry also increases the risk of sexual violence. Approximately 20 percent of farmworkers live in employer-provided housing^{cxxi} which is frequently left in substandard conditions. Many farms do not provide separate sleeping or bath

facilities for women.^{cxxii} “[S]ubstandard and overcrowded farmworker housing may force women to live with multiple strangers and in insecure places where they can be vulnerable to physical assaults.”^{cxxiii} Furthermore, the lack of stable year round housing makes it difficult for legal advocates and social service providers to assist and stay in touch with migrant workers who move often in search of fieldwork.^{cxxiv}

Figure 4 Farmworker housing often crowds several people into a room, with little security or privacy. Communal bathrooms are rudimentary and rarely feature stalls or private showers.

PHYSICAL REQUIREMENTS

The nature of working in the fields and on processing lines puts women at further risk of sexual violence by requiring exposing body positions to perform the work. Waugh's study found that “stoop labor necessary to harvest crops such as strawberries, lettuce, and broccoli required women to bend over, rear end in the air and in male [supervisors' and] coworkers' plain view. These daily circumstances made respondents vulnerable to sexual stares, verbal comments, and unwanted grabbing.”^{cxxv} Additionally, the lack of bathroom facilities near the fields creates more risk as women must relieve themselves near work sites in public.^{cxxvi}

In the processing plants, women workers are stuck on the line, engaged in tasks that require high-speed handling of agricultural goods, knives and hooks on a conveyor belt where line leaders and supervisors can easily harass them.^{cxxvii} “A male supervisor will just walk down the line and run his hand along their buttock, make sexual comments,”^{cxxviii} or worse. Women workers cannot avoid or move away from a supervisor who sexually harasses them and often must share a locker room with their male coworkers.^{cxxix}

Studies disagree on whether the way women farmworkers dress plays a factor in sexual violence. Kim's study revealed that some women farmworkers “felt that other women wearing provocative or revealing clothing suggested the wrong idea. As a result, some women purposely wore baggier clothing to hide their bodies and deter any unwanted attention from the men.”^{cxxx}

However, Waugh's study argues that women farmworker's clothing is not a factor because even when these women are covered from head to toe, men continue to sexually harass them.^{cxxx}

FAMILIAL RELATIONSHIPS

Another unique aspect of the agricultural industry that is dramatically different from typical middle-class employment is that the workforce is frequently made up of family members, friends and neighbors.^{cxxxii} "It is common for extended families to work at the same industrial farm, orchard, or field, and to live together in the same community with their coworkers. For many migrant farmworkers, the distinction between work life and family life is blurred because the underlying relationships are the same."^{cxxxiii} In fact, 69 percent of farmworkers found their job through friends or relatives.^{cxxxiv} However, the interwoven ties between work and home can increase the risk of sexual violence.^{cxxxv} Family and family-like relationships may exist between supervisors and their subordinates or between coworkers that result in sexual abuse in the workplace.^{cxxxvi} The Bureau of Justice Statistics reports that 64 percent of violent crimes committed against women in 2010 were committed by an intimate partner, other relative, or friend or acquaintance.^{cxxxvii} Thus, sexual assault and domestic violence can occur frequently in the workplace because the relationships and power structures are similar to those in the home.^{cxxxviii} These close ties also complicate and deter the reporting of sexual violence. For example, the perpetrator may be close friends with the woman's family members or she may work with his wife, creating a ripple effect of social impacts if she were to report his abuse. "Due to the merging of work life and family life, a perpetrator of sexual assault in a migrant farmworker workplace has even more power with which to threaten to harm the victim if she tells anyone about the assault, including firing her, spreading rumors about her in their community, and taking action against her family members."^{cxxxix}

POWER DYNAMICS

Common perpetrators of sexual violence against women farmworkers are low-level supervisors such as foremen, high-level supervisors, farm labor contractors, company owners and coworkers. Most are in power positions with the authority to hire, fire, direct daily activities or give benefits to workers such as better hours and task assignments.^{cxl} Coworkers may also be perpetrators, enabled by an environment that is tolerant of the sexual abuse of women farmworkers.^{cxi} However, of the 41 federal cases of sexual violence against agricultural industries filed by the EEOC between 1988 and 2012, 92 percent of the cases involved abuse by those in power positions such as supervisors, managers, owners or relatives of owners.^{cxlii} Perpetrators may be related to the women they abuse or are frequently closely tied to

their family and community as most sexual violence survivors were assaulted by someone they know such as a friend, coworker, employer, acquaintance or family member.^{cxlvi}

"Perhaps of all settings, the workplace exhibits the greatest imbalance of power especially for non-English speaking women, immigrants, those who work the fields, and those who are geographically, socially, and linguistically isolated."^{cxliv} The power dynamics in the agricultural industry foster the exploitation of women farmworkers, drastically increasing the likelihood of rampant sexual violence.^{cxlv} Supervisors often have the power to dictate work assignments and to determine who can make enough money to feed their children and keep a roof over head.^{cxlvi} Supervisors also usually speak English and therefore often act as the communication link between non-English speaking workers and authorities.^{cxlvii} Harassers often have lawful immigration status, giving them power over unauthorized workers to threaten calling immigration authorities for reporting sexual violence.^{cxlviii} Additionally, workers often depend on their employers for housing and transportation^{cix} and some foremen are related to the growers or owners, making it even harder for women to stop the abuse.^{cl} Sexual violence in agricultural differs from that in other industries in the high level of violence that is involved.^{cli} Many supervisors and owners carry guns and a perpetrator may threaten to kill a woman's family members who live here or back in her home country through recruiters if she reports him.^{clii} The harasser often believes that his association with authority figures allows him to do what he wants without consequences and will tell new female workers that no one will believe them if they complain because he has worked on the farm for many years and is trusted by the employers.^{cliii}

Frightened and confused teenagers, workers with shaky immigration status, and single mothers desperate to feed their children are easy prey for a harasser.

Foremen and supervisors often take advantage of the vulnerabilities of women farmworkers, exploiting them, knowing that the women are unlikely to report the abuse.^{civ} "What is clear is that as the disparity in power increases the conditions for egregious, violent sexual harassment to occur also increase. Frightened and confused teenagers, workers with shaky immigration status, and the single mother desperate to feed her children are the easy prey for a harasser."^{clv}

LACK OF LABOR LAW PROTECTIONS AND OVERSIGHT

"Farmworkers are the least protected workers in America."^{cvi} Most workers in the agricultural industry work in a shadow economy that is excluded from major labor law protections.^{cvi} They receive no sick leave or vacation time, meaning they could lose their job if they miss work because of an injury or illness.^{cvi} They have no federal protection from retaliation by employers for labor organizing.^{clix} Employers can fire them at will without having to document employee misconduct and few if any sexual harassment policies exist in most agricultural businesses.^{clx} The few labor laws that do apply to farmworkers are regularly violated.^{clxi}

Most workers in the agricultural industry work in a shadow economy that is excluded from major labor law protections.

EXEMPTIONS

When most major federal labor laws were passed during the New Deal era in the 1930s, powerful Southern states lobbied to exclude agricultural and domestic workers, who were mostly black, from labor protections.^{clxii} Farmworkers were specifically excluded “as part of a compromise between President Franklin D. Roosevelt and Southern lawmakers who wanted to preserve the social and racial order on which the South’s plantation system depended.”^{clxiii} Today, powerful economic interests of the agricultural industry continue to block many proposed changes to labor protections. California alone contributed \$27.3 billion of agricultural output in 2008, which was 17.3 percent of all agricultural output in the United States.^{clxiv} Texas is the second largest contributor, with an output of \$9.8 billion, which was 6.2 percent of the country’s agricultural output that year.^{clxv} While some laws have been amended and workers have won concessions in a few states, farmworkers remain excluded from many federal labor protections.^{clxvi}

Today, agricultural workers are excluded from collective bargaining rights under the National Labor Relations Act (NLRA)^{clxvii} and from several provisions of the Fair Labor Standards Act (FLSA). “While the minimum age to work in most industries is 16, the standard minimum age for agriculture is 14.”^{clxviii} However, small farms have no minimum age requirement for children to work outside of school hours with their parent’s permission,^{clxix} resulting in more and more young girls working in the fields. Contributing to the poverty of women farmworkers is the fact that small farms are also exempt from paying minimum wage.^{clxx} Larger farms often pay piece-rate instead of hourly wages in order to circumvent their minimum wage requirements.^{clxxi} “Although agricultural work includes some of the most dangerous work in the country, the Occupational Health and Safety Administration (OSHA) does not enforce federal workplace health and safety standards on farms with fewer than 11 employees, effectively excluding a third of all farmworkers.”^{clxxii}

LACK OF ENFORCEMENT OF APPLICABLE LAWS

The few labor protections that do exist for farmworkers are often violated and rarely enforced.^{clxxxiii} In fact, many growers attempt to insulate themselves from being legally responsible for workers by using farm labor contractors to act as intermediaries responsible for hiring farmworkers.^{clxxxiv} The use of contractors varies by state, but it is estimated that contractors and other third party employers supply 50-75 percent of the farmworkers for seasonal work in California.^{clxxxv} Growers benefit from this arrangement because the contractor becomes the legal employer of the workers, allowing the grower to avoid record keeping requirements and legal obligations such as paying minimum wages and workers’ compensation.^{clxxxvi} Farm labor contractors, however, lack transparency as many are unregistered and operating illegally in the United States with little threat of interference as there is a severe shortage of regulatory oversight.^{clxxxvii} “In industries

No federal agency tracks sexual harassment incidents in agriculture. Lack of regulatory oversight and inadequate record keeping leaves employers unaccountable and farmworkers vulnerable to abuse.

where flouting the law has been common, where legislative exemptions from labor and employment laws is common – much like slavery – sexual assault of the workers can easily occur.”^{cxxxviii}

No federal agency tracks the number of sexual harassment incidents in agriculture and the limited regulatory oversight of applicable labor laws and a lack of adequate record keeping of monitoring and enforcement in the industry leaves employers unaccountable and farmworkers vulnerable to abuse and invisible to public attention.^{cxxxix} Typically, there is little record keeping of state and federal monitoring efforts and the data that exists does not help determine employer compliance or effectiveness of existing farmworker protections.^{cxxxx} The majority of farms in the United States are small farms^{cxxxxi} that are not included in official statistics, leaving approximately one-third of all crop farmworkers in the shadows.^{cxxxxii} In addition, agricultural employers are dis-incentivized to report accurate labor information as they want to avoid bringing attention to illegal employment arrangements or unsafe workplace practices.^{cxxxxiii} Limited regulatory agency resources and a lack of coordination among regulatory bodies charged with preventing and investigating farm labor abuses further contributes to ineffective monitoring and documenting of workplace violations.^{cxxxxiv}

INADEQUACIES OF ANTI-DISCRIMINATION LAWS

Theoretically, federal law protects all workers, including unauthorized workers, from sexual violence.^{cxxxxv} Title VII of the Civil Rights Act of 1964 prohibits discrimination on the basis of race, color, religion, national origin or sex and includes sexual harassment as a form of sex discrimination.^{cxxxxvi} Title VII also prohibits retaliation, including threats to turn workers over to immigration authorities, against workers who report discrimination.^{cxxxxvii} However, Title VII is often unable to provide women farmworkers with meaningful protections because it fails to address the combination of discrimination factors they face.^{cxxxxviii} They are not targeted solely based on their sex, but based on their national origin and immigration status as well.^{cxxxxix} “Employment discrimination law, by focusing on protected classes separately, cannot adequately address the problems of those whose oppression is defined by more than one category, such as women of color... Even if the sex discrimination problems facing a female farmworker are corrected, she still must battle the problems facing her as a working class, undocumented Latina. Employment discrimination law also misses the unique problems caused by the intersection of more than one protected class.”^{cxc}

Even if the sex discrimination problems facing a female farmworker are corrected, she still must battle the problems facing her as a working class, undocumented Latina.

Title VII provides an affirmative defense to employers if they can show that it “exercised reasonable care to prevent and promptly correct any sexually harassing behavior” and “the plaintiff employee unreasonably failed to take advantage of any preventive or corrective opportunities provided by the employer or to avoid harm otherwise.”^{cxcii} This requirement that complainants immediately file a report using their employer’s procedures is unrealistic and particularly limits access to rights for women and minorities by ignoring the racial and cultural

context of how sexual violence takes place in the agricultural industry.^{cxcii} Moreover, there is a lack of judicial understanding of cultural differences and language barriers that result in erroneous conclusions about the credibility of female immigrant complainants.^{cxciii} Robin R. Runge, Assistant Professor at University of North Dakota School of Law, notes that current laws intended to prevent workplace sexual violence “fail to effectively respond to the experiences of this group of minority, low-income women and thus perpetuate their poverty and exploitation.”^{cxciv}

LANDMARK CASES

In 1986, the Supreme Court first recognized sexual harassment as an actionable claim under federal law in *Meritor Savings Bank v. Vinson*, 477 US 57 (1986). Since that time, according to an investigation by the Center for Investigative Reporting, workers have filed 1,106 sexual harassment civil complaints with the EEOC against agricultural-related industries between 1988 and 2012, of which the commission filed 41 federal lawsuits.^{cxcv} One of the first landmark cases was *EEOC v. Tanimura & Antle*,^{cxcvi} where the EEOC, California Rural Legal Assistance and the Golden Gate Women’s Employment Rights Clinic alleged that a class of women had been sexually harassed and that Blanca Alfaro was also forced to have sex with the hiring official on two occasions. She was fired after protesting further harassment, as was her coworker who spoke up for her. The case settled in 1999, awarding the women \$1.855 million. As the largest farmworker settlement reached to date and against one of the largest growers in the country, this case sent shockwaves through the agricultural industry.^{cxcvii} The next big case, *EEOC v. Iowa AG, LLC dba DeCoster Farms*,^{cxcviii} involved numerous Mexican women who had been trafficked into the United States to work in DeCoster’s poultry plants. These women were repeatedly raped by coworkers and supervisors who threatened to fire and deport them if they complained. The case settled for \$1.525 million in 2002.^{cxcix}

In 2004, *EEOC v. Harris Farms*^{cc} became the first sexual harassment lawsuit against a grower to reach a federal jury trial. “The EEOC alleged that Olivia Tamayo had been raped in the fields at gunpoint by her supervisor who threatened to kill her husband if she reported the rapes.”^{cci} More than five years after she reported the rapes to her employer and law enforcement, a California jury awarded her nearly \$1 million.^{ccii} Another significant case involving use of a weapon was *EEOC v. Willamette Tree Wholesale, Inc.*,^{cciii} where, in 2010, the EEOC and Oregon Law Center alleged that a supervisor raped a farmworker with shears to her throat and threatened to fire her and kill her siblings if she reported the rapes to anyone.^{cciv} Traumatized by the rapes and threats, she did not file a report with the EEOC until 62 days past the 300 day deadline to file a charge.^{ccv} The court, however, allowed the claim to proceed after finding that equitable tolling of the filing deadline was warranted in this case because the plaintiff was sexually harassed and repeatedly raped by her supervisor in the workplace, leaving her “so broken and damaged” that she was unable to protect her rights.^{ccvi}

A second case finally made it to federal trial in 2010 after the EEOC and the Northwest Justice Project filed a lawsuit against one of the country's largest apple producers, Evans Fruit Company,^{ccvii} in Yakima Valley, Washington alleging that a class of women were sexually harassed and sexually assaulted by supervisors and faced threats and acts of retaliation for filing a complaint.^{ccviii} Throughout the trial, Evans Fruit argued that it should not be responsible because none of the women filed sexual harassment complaints to the company, disregarding the obstacles to reporting and fears of retaliation the women faced.^{ccix} The jury decided that the stories of the 14 women farmworkers who testified were inconsistent and found for the company.^{ccx} The most accused perpetrator, an orchard foreman, was fired after the suit was filed.^{ccxi} However, his dismissal letter made no mention of the sexual harassment allegations.^{ccxii} Although the women lost, this case brought much attention to the issue and has pressured some growers to institute sexual harassment policies.^{ccxiii}

While these cases and others have brought attention to the problem of sexual violence in the agricultural industry, very few criminal charges have been prosecuted against perpetrators^{ccxiv} and the civil remedies available are generally limited to injunctive relief such as sexual harassment training for employees, termination of the harasser and reinstatement and back pay for the plaintiff if she was fired as a result of the harassment.^{ccxv} Sexual harassment policies and training are not required in the agricultural industry by federal law and many female farmworkers still fear standing up for their rights.^{ccxvi} In addition to federal employment law remedies under Title VII, women farmworkers may also have a claim under state or local anti-discrimination employment statutes or state criminal statutes.^{ccxvii} However, few state laws require sexual harassment policies or training in agricultural related industries.^{ccxviii}

With the lack of most labor law protections and the unique vulnerabilities and physical risks that women farmworkers face, their experiences of sexual violence differ greatly from those discussed in mainstream sexual violence literature. Waugh argues that these differences require broadening the theories of sexual violence to include experiences of diverse populations.^{ccxix}

Sexual harassment policies and training are not required in the agricultural industry by federal law and many female farmworkers still fear standing up for their rights.

ECONOMIC, SOCIAL AND POLITICAL CONSIDERATIONS

Vulnerabilities of Women Farmworkers That Heighten the Risk of Sexual Violence

Women farmworkers face simultaneous sexist, racist, economic and political discrimination, making them the most vulnerable, easily exploitable and dispensable workers in the United States.^{cxxix} As Maria L. Ontiveros, Professor of Law at University of San Francisco School of Law explains, the “issues of work, class, gender, race and immigration status are all inextricably intertwined.”^{cxxxii} Thus, the guiding framework of Waugh’s 2010 study of Mexican women farmworkers in California was based on intersectionality theory which examines how these discriminatory systems form layers of inequality that structure individuals’ positions in society.^{cxxxii} The combination of the many problems women farmworkers face (being female in a male-dominated industry, living in poverty, language barriers, being an immigrant, being an indigenous immigrant and oftentimes lacking work authorization) heighten the risk of sexual violence and must all be taken into account as interrelated in defining the oppression faced by these workers and finding effective solutions.^{cxxxiii}

Women farmworkers face simultaneous sexist, racist, economic and political discrimination, making them the most vulnerable, easily exploitable and dispensable workers in the United States.

SEX DISCRIMINATION

Literature shows that sexual violence against women is more common and more likely to be perceived as severe in male-dominant work environments.^{cxxxiv} Women constitute only 20-25 percent of the total farmworker population^{cxxxv} and their workplace experience in the United States differs greatly from that in Mexico and other Central American countries where most worksites are gender segregated as opposed to men and women working side by side as they do here.^{cxxxvi} Women farmworkers are “locked into low-wage, low-prestige jobs, [are] dependent on men for their employment, perform tasks that [are] evaluated by men, and work in crews and teams organized by men.”^{cxxxvii} Girls and young women are especially vulnerable to sexual abuse in the agricultural industry^{cxxxviii} where “[h]undreds of thousands of children under 18 work in agriculture in the United States, at far younger ages, for longer hours, and under more hazardous conditions than all other working children.”^{cxxxix} These youths are extremely susceptible to abuse and are the least likely to be able to defend themselves from sexual violence.^{cxxx}

Latino cultural beliefs about gender norms likely play a significant role in the prevalence of sexual violence in the agricultural industry. *Machismo* values define separate roles for men

and women; however, “the need for economic stability has forced many Latinas in the US to work alongside men to support their families, which has in turn challenged traditional gender norms.”^{ccxxxi} “In the largely Latino agriculture industry, male co-workers and foremen may target and sexually harass women workers to preserve *machismo* and *marianismo* cultural values.”^{ccxxxii} Immigrant women who were socialized in their home countries to be subservient to men are often reluctant or afraid to speak up against their male harassers and stay silent about the injustices committed against them.^{ccxxxiii} Reporting abuse is especially difficult for those who come from “immigrant communities where women are expected to have only limited, supervised contact with the opposite sex, are blamed for any sexual contact with men that occurs outside of marriage (consensual or otherwise), or if a female’s status as a virgin is viewed as central to her worth.”^{ccxxxiv} Thus, “[r]eporting the sexual assaults requires challenging male hierarchy in the workplace and the family while fearing economic, social, and family retaliation.”^{ccxxxv}

POVERTY

Women farmworker’s economic instability heightens their susceptibility for sexual violence. Farmworkers in the United States are among the poorest of the working poor as over 60 percent of farmworker households live in poverty.^{ccxxxvi} This is partly due to the fact that migrant farmworkers on average are employed only 28 weeks out of the year^{ccxxxvii} and women farmworkers are paid significantly less than their male counterparts.^{ccxxxviii} “Analysis of NAWS data from 2004-2006 by the Southern Poverty Law Center found that the average personal yearly income of female crop workers was \$11,250, significantly lower than the average income of \$16,250 for male crop workers.”^{ccxxxix} Women farmworkers are generally assigned less favorable work assignments, have less opportunity to advance, are the first to be laid off, are assigned the lowest paying jobs, given fewer hours and paid less per hour than their male coworkers.^{ccxl} With such low wages, these women have little if any bargaining power to demand improved work conditions.^{ccxli} Studies have identified single mothers as being particular targets of sexual violence because harassers know that they need to keep their job to feed their children and are less likely to complain about the abuse they encounter.^{ccxlii}

Single mothers are particular targets because harassers know that the women need to keep their jobs to feed their children, and are less likely to complain about abuse.

Low education levels also play a role in keeping women farmworkers in poverty. Most of these women have little formal education and low literacy rates.^{ccxliii} On average, foreign-born workers highest completed grade level is the sixth grade.^{ccxliv} A California report found that only 15 percent of farmworkers in the state were “considered more than ‘marginally literate,’ in terms of reading and writing in their own language.”^{ccxlv} Poverty and fear of job loss have been identified as key reasons why women farmworkers often do not report sexual violence at work.^{ccxlii}

IMMIGRATION STATUS

For many women farmworkers, the journey to the United States begins a cycle of violence that makes them more vulnerable to abuse in the future. Many women risk their lives to cross the border, trying to escape poverty and build a future for their children, believing they are coming to a land of opportunity for those who work hard.^{ccxlvi} However, many become heavily indebted to the *coyotes*, or human smugglers, who guide them along the way.^{ccxlviii} “Typically, undocumented immigrants will pay smugglers anywhere from \$1,500 to more than \$10,000 to guide them and their families across the border.”^{ccxlix} While making the extremely dangerous journey, many women are robbed, beaten and raped by *coyotes*, which may cause them persistent and severe trauma and begin a cycle of re-victimization.^{ccl} Although underreported and understudied, researchers believe sexual violence is rampant on the journey across the border.^{ccli}

Many of these unauthorized women “often end up on farms, doing some of the most dangerous work in the United States. According to the National Safety Council and the Department of Labor, farmwork consistently ranks among the top five industries for accidents and injuries. It’s also among the lowest paying. And for immigrant women, it’s rife with sexual harassment and abuse.”^{cclii} Because of their heavy debts and the fact that they risked so much, many women who crossed the border stay silent about sexual assault instead of risking losing their livelihoods or being deported.^{ccliii}

Most farmworkers are foreign born^{ccliv} and face discrimination and stigma based on their actual or perceived immigration status.^{cclv} The combination of their sex, national origin, class and immigration status results in harassers targeting women farmworkers. Based on these factors these women are treated as commodities to be utilized and exploited.^{cclvi} “Labeling immigrants as ‘illegal’ or ‘aliens’ constructs them as a less-than-human other. Because of our socially held view of racial and gender hierarchies, certain types of exploitation and control are uniquely acceptable when applied to certain workers, especially women, immigrants, and workers of color.”^{cclvii}

Immigrant-related discrimination and fear of deportation severely deter women farmworkers from reporting sexual violence or seeking help from police, rape crisis shelters, counseling programs and the courts.^{cclviii} Unauthorized workers often feel virtually powerless to report abuse for fear they will lose their job, be turned over to immigration officials, deported and separated from their children and families.^{cclix} Thus, many women farmworkers accept the sexual abuse as a burden they must bear to remain in the country.^{cclx}

Labeling immigrants as ‘illegal’ or ‘aliens’ constructs them as a less-than-human other.

Their distrust of police and fear of being deported after reporting sexual assault is well-founded as law enforcement in many areas of the country collaborate directly with immigration authorities. Federal immigration programs, such as 287(g)^{cclxi} and Secure Communities,^{cclxii} allow local law enforcement officials to check the immigration status of arrested individuals, detain unauthorized immigrants and turn them over to federal immigration authorities.^{cclxiii} Although these programs were intended for criminals, they have been used by many localities

as a tool to discriminate and root out otherwise law-abiding immigrants.^{cclxiv} Women farmworkers must be cautious when reporting abuse to law enforcement, knowing that they could be deported instead of protected. This is especially true when many police officers are not trained on sexual violence and often arrest both parties when they consider the incident a domestic violence case.^{cclxv} Because of the high risk of deportation, advocates debate over how to best advise women farmworkers about reporting abuse.

Even women farmworkers with legal immigration status fear losing their lawful status as a result of reporting. For instance, a woman's marriage may be the basis of her eligibility to reside lawfully in the United States, so fear of her husband ending the relationship if she reported a sexual assault could keep her silent.^{cclxvi} Likewise, if she or her family members have a temporary guestworker visa, such as an H-2A visa, she may put up with the abuse instead of quitting her job or risking being fired as the visa is dependent on that employer maintaining her legal status.^{cclxvii} Farmworkers who have these exclusive contracts with their employer are especially vulnerable to exploitation on the job.^{cclxviii} "For example, many trafficking victims are H-2A workers who arrive in the United States desperate for work. These workers may be faced with horrible working and living conditions, owe debt to their employers or to recruiters in their home countries ('debt peonage'), have had their passports confiscated by their employer or recruiter, and/or be working under threats of violence directed toward them and/or their families."^{cclxix} Under these guestworker programs, workers are permitted to come to the United States to work for one specific employer. However, if the worker asserts her rights, the employer can fire her and terminate the visa.^{cclxx} Although these programs theoretically have provisions to protect workers, the reality is that workers do not have access to the courts to enforce those provisions.^{cclxxi}

Women farmworkers are described as the "perfect victims" because of their tenuous immigration status, isolation, perceived lack of credibility and the fact that many do not know their rights.^{cclxxii} Many immigrants believe that if they are unauthorized to work in the United States, the legal system does not provide any mechanism for them to seek remedies for crimes against them.^{cclxxiii} Some do not know that sexual harassment is illegal and view it as another unpleasant aspect of the job that they must put up with.^{cclxxiv} Many are unaware that they have a right to challenge sexual harassment and they do not know how to file a claim or where to seek guidance.^{cclxxv}

Women farmworkers are described as the "perfect victims" because of their tenuous immigration status, isolation, and the fact that many don't know their rights.

LANGUAGE BARRIERS

Language barriers are another significant obstacle for immigrant women farmworkers, putting them more at risk of sexual violence and less likely to report abuse. Spanish is the predominant language of over 80 percent of farmworkers.^{cclxxvi} Only 24 percent of farmworkers claim to speak English well and 44 percent report they cannot speak English at all.^{cclxxvii} Female farmworkers are much less likely than their male counterparts to speak English, making them more vulnerable to exploitation.^{cclxxviii} "Because of the language barrier, women farmworkers

tend to be almost invisible in our society.”^{cclxxix} Many managers and foremen, on the other hand, are bilingual and may take advantage of the fact that non-English speaking workers are dependent on their language skills to communicate and keep their jobs.^{cclxxx} Thus, if a bilingual supervisor is the harasser, he is able to explain his side of the story to the farm owner in English but the woman cannot.^{cclxxxi} While other bilingual coworkers could help by translating for her, they are often afraid to get involved and put their own jobs in jeopardy.^{cclxxxii} Owners often do not want to lose their managers and decide to fire the complaining worker instead.^{cclxxxiii}

Language barriers also limit access to legal and support services for many women farmworkers who have experienced workplace sexual violence. Police officers in need of interpreters often call Border Patrol or United States Immigration and Customs Enforcement (ICE) to translate when a sexual assault report is made.^{cclxxxiv} While some police departments use paid or volunteer interpreters, many do not.^{cclxxxv} A sheriff in upstate NY noted, “[t]here are a lot of crimes in the Hispanic community that go unreported because of ICE or Border Patrol and the language issue. [But] we don't have the luxury of calling a paid interpreter.”^{cclxxxvi} Furthermore, services such as “[r]ape crisis centers, shelters, victim service programs, legal service offices, police departments, prosecutors' offices and courts may not have employees who can speak a victim's native language or may lack qualified interpreters.”^{cclxxxvii}

Indigenous women farmworkers face even more barriers as they often do not speak English or Spanish, are less educated, more in poverty and are subjected to discrimination in their home countries and here. The additional layer of a language barrier creates further isolation and discrimination and can cause added stress to these women who may not be able to understand their surroundings or communicate with authorities. A 2010 study of indigenous farmworkers in California found 23 different languages among them.^{cclxxxviii} A study on indigenous farmworkers in Oregon found that 20-30 percent of the state's farmworker population during harvest season were Mixtecos, members of an indigenous group from various states in southwest Mexico.^{cclxxxix} The study found that indigenous-speaking workers face even greater obstacles than Spanish-speaking farmworkers because of cultural and linguistic differences.^{ccxc} “There are over 60 indigenous languages spoken in Mexico alone. Few agencies and organizations serving indigenous farmworkers have acquired the language skills or cultural competence necessary to assist these communities.”^{ccxci} Even basic occupational safety information is often inaccessible because it is rarely provided in indigenous languages.^{ccxcii} All focus groups in the study said that they felt as though they had no legal means of workplace protection.^{ccxciii}

Indigenous women farmworkers face even more barriers as they often don't speak English or Spanish, are less educated, more in poverty, and subject to discrimination at home and here.

THE IMPACT OF SEXUAL VIOLENCE ON WOMEN FARMWORKERS

Numerous studies have shown that sexual violence can cause physical and psychological damage, disrupt social dynamics, negatively impact women's support systems and affect their attitudes towards their jobs. In addition, women who choose to report abuses often face retaliation from the employer and supervisors and negative responses from her family and community. However, delays in reporting can have significant implications for a woman's ability to access timely medical, legal and mental health assistance.^{ccxciv}

PHYSICAL AND PSYCHOLOGICAL IMPACTS

In Waugh's study, common physical effects, regardless of the type of sexual violence women experienced, were trouble sleeping, shaking hands, headaches, sweaty hands, heart palpitations and chronic tiredness.^{ccxcv} Survivors of sexual violence may also suffer from physical pain, cuts, bruising, chronic pain, sexually-transmitted infections, unintended pregnancies, high-blood pressure, urinary tract infections, gastrointestinal disorders, gynecological and/or pregnancy complications, migraines, back pain, physical disabilities that could interfere with their ability to work and insomnia.^{ccxcvi}

The psychological impacts of sexual violence are pervasive and can negatively affect women's lives in a myriad of ways. Psychological symptoms may include post-traumatic stress disorder, depression, anxiety, panic, nervousness, flashbacks, fear of being raped in the future, being afraid to go to work because of fear of facing more harassment, grief, anger, hostility, shock, denial, guilt, shame, humiliation, self-blame, withdrawal, low self-esteem, personality changes, eating disorders, substance abuse, suicidal attempts and difficulty trusting others.^{ccxcvii} Experts have noted that "[t]he level of trauma is not determined by whether penetration occurred, a weapon was used, or the number of times the victim was assaulted. Rather, trauma is related to the extent to which the victim experienced betrayal, extreme fear, blame (including self-blame), or invalidation."^{ccxcviii} Cumulative experiences of trauma however, make an individual more vulnerable to future traumatization by eroding her ability to protect herself and cope with the abuse.^{ccxcix}

Even before adding on these additional symptoms caused by sexual violence, farmworkers typically experience mental health problems such as stress, depression and anxiety more acutely than the general public.^{ccc} A 2008 study of Mexican-American farmworkers

Common physical effects are trouble sleeping, shaky hands, headaches, heart palpitations, along with pain from injuries, sexually transmitted infections, pregnancy. Psychological effects include PTSD, anxiety and fear, grief, guilt, eating disorders, substance abuse, suicidal thoughts.

found that almost 40 percent experienced depression, compared to 18 percent of the general public.^{cccI} This high base-line of stress is caused by constant worries about job insecurity, living in poverty, worrying about being able to feed their children, social and geographic isolation, poor housing conditions, separation from family, health and safety occupational concerns, stress of adjusting to a new culture, facing racial and sex discrimination, language barriers, stigma related to immigration status and fears of deportation.^{cccII} Sexual violence then adds yet another layer of stress for women farmworkers. Exposure to such chronic stressors results in wear and tear on the body, increasing the risk of negative health consequences.^{cccIII}

Sexual violence not only impacts the survivor, but her family often suffers psychological and social effects as well. Families may need to move to escape the violence, uprooting children from their homes, friends and school. Family members often experience feelings of anger or guilt as they witness the pain their loved one experiences and are unable to help her.^{cccIV} They may suffer from her withdrawal from her family and community as a result of the sexual violence.^{cccV} Additionally, if the perpetrator threatens to kill the woman's family members, they may also experience fear, anxiety, anger and other psychological symptoms.^{cccVI}

SOCIAL IMPACTS

Sexual violence in the workplace disrupts social dynamics and can severely impact women's support systems. Women in Kim's study described how being sexually harassed is an emotionally and socially isolating experience as female coworkers often gossip and start rumors, blaming the woman for provoking the perpetrator.^{cccVII} The stigma women face and the lack of cohesion and support among female workers makes it difficult for them to seek help and discourages women from reporting the abuse, further reinforcing sexual violence in the workplace.^{cccVIII}

Reporting a sexual assault may expose an immigrant woman to ostracism or physical danger, particularly in small insular immigrant communities.^{cccIX} The topic of sexual assault may be considered too taboo to talk about and community members may discourage her from taking action against the perpetrator or seeking help from outside of the community.^{cccX} If she decides to seek help from the justice system or social services anyway, she may be socially ostracized, isolated and denied support from the very community she needs most.^{cccXI}

As rumors spread after a woman reports being sexually assaulted by a supervisor, her family and friends may shun her, blaming her for the harasser's behavior and accusing her of bringing shame to the family.^{cccXII} The abuses can destroy intimate relationships and lead to marital separations and divorce.^{cccXIII} The woman's husband may beat her; threaten to leave her and take away her children; or assault or kill the perpetrator and end up in prison, leaving her to raise and provide for her children as a single parent.^{cccXIV} Her supervisor may threaten her at work and in her community and tell their mutual friends that she is lying.^{cccXV} Deborah Brake, Associate Professor of Law at

After a woman reports being assaulted, her family and friends may blame and shun her; her intimate relationships may fall apart; the accused may threaten her and challenge her credibility.

University of Pittsburgh School of Law, noted that women who challenge discrimination are often ostracized by members of their communities and perceived to be overly sensitive or troublemakers if they complain.^{cccxvi} If the perpetrator ends up being fired or punished due to the accusations, the woman may be blamed and retaliated against by her family and community members for accusing him of doing something so terrible.^{cccxvii} If the perpetrator or employer retaliates against her family, she will likely face increased harassment and ostracism by her family and community.^{cccxviii} If she is able to take her claim to court, the case will likely take years to resolve, during which time she will continue to be punished by the perpetrator, her family and the community.^{cccix}

OCCUPATIONAL IMPACTS

Widespread sexual violence in the agricultural industry has led women farmworkers to perceive organizational tolerance for the abuse and feel dissatisfied with their jobs, coworkers and supervisors.^{cccxx} A recent study of 49 indigenous and non-indigenous Mexican immigrant women farmworkers in Willamette Valley, Oregon found that women who experienced or witnessed sexual harassment commonly saw supervisors picking favorite women, giving lighter work to those who gave in to sexual advances and harder work to those who refused.^{cccxi} Consequently, workers felt resentment and anger toward the harassing supervisors and the women who went along with the behavior, creating conflicts and damaging the goodwill of the workplace community.^{cccxxii} Women reported that sexual harassment made the workplace feel unsafe and unfair but that they felt discouraged from speaking up because they either did not know who to report the abuse to or thought they would not be believed.^{cccxxiii} Women farmworkers commonly feel they are not acknowledged for their hard work but are instead sexually objectified and disrespected on the job.^{cccxiv}

RETALIATION FOR REPORTING ABUSE

Women farmworkers commonly face retaliation for reporting sexual harassment to their employer. Of the 41 federal cases of sexual harassment against agricultural industries filed by the EEOC between 1988 and 2012, 80 percent included claims of retaliation.^{cccxxv} William R. Tamayo, the San Francisco District Regional Attorney for the EEOC, reports that “[n]early every harassment lawsuit filed by the EEOC includes a retaliation allegation. Often times the retaliatory behavior occurred right after sex was refused, a protest was made, or a formal complaint was made to management.”^{cccxxvi}

Many farmworkers work with family members. Retaliation for reporting abuse can involve firing the victim along with her family, resulting in loss of income for the whole household.

The types of retaliation women farmworkers face after reporting sexual harassment in the workplace include demotions, fewer work hours, more demanding work, more abusive treatment and job termination.^{cccxxvii} “Because many farmworkers work with family members, retaliation can mean the victim is fired along with her family, resulting in loss of income to the

entire household.”^{cccxxviii} Furthermore, these women may lose their employee housing, be blacklisted from jobs at other farms or deported from the country.^{cccxxix}

CONSEQUENCES OF DELAYED REPORTING

For various reasons discussed below, women may not immediately report incidences of sexual harassment or assault to their employers or law enforcement. However, delays in reporting can have significant implications for a woman’s ability to access timely medical, legal and mental health assistance.^{cccxxx} For instance, a charge must be filed with the EEOC within 300 days of an incident. However, some courts have permitted such time limitations to be equitably tolled, allowing the claim to proceed, when the plaintiff is prevented from filing the claim on time because of the defendant’s wrongful conduct or extraordinary circumstances beyond the plaintiff’s control.^{cccxxxi} Equitable tolling has been found applicable when a plaintiff was sexually harassed and repeatedly raped by her supervisor in the workplace, leaving her “so broken and damaged” that she was unable to protect her rights.^{cccxxxii} Additionally, “a delay in reporting may contribute to a cloud of suspicion or distrust when the victim does report, undermine a victim’s ability to prosecute an assault, and lead to increased health risks.”^{cccxxxiii}

HOW DO WOMEN FARMWORKERS RESPOND TO SEXUAL VIOLENCE?

Women farmworkers use a myriad of strategies to try to prevent being sexually harassed at work and to cope with the abuse they have suffered. Few women report the abuse to authorities and most rely on informal support systems before/if they seek any formal assistance. While many social services exist for survivors of sexual assault, access may be limited for women farmworkers.

COPING STRATEGIES

Attempting to prevent being targeted by supervisors and coworkers, women farmworkers have utilized creative preventative measures. A common strategy is to wear protective clothing. Even in the extreme heat of summer, women farmworkers wear long baggy pants, long sleeve shirts, wide brimmed hats, boots and bandanas that cover their faces. These clothes serve two purposes: to protect the women from the hot sun and pesticides and to make them look less feminine and attractive to male supervisors and coworkers.^{cccxxxiv} Some women in Kim's study tell men they are married when they are single or that they are a transvestite although they are heterosexual.^{cccxxxv} They also try to avoid harassers; however, unlike the findings of sexual violence studies in non-agricultural settings, women farmworkers are generally unable to avoid their harassers because of the hierarchical nature of their work environment.^{cccxxxvi}

Surveyed women also said that education on worker's rights helps protect against sexual violence.^{cccxxxvii} Women in Kim's study encouraged other participants to speak up about their rights and experiences to break the silence about abuse. "They discussed strategies for reporting [workplace sexual harassment] to authorities, such as bypassing the foreman and reporting directly to growers and owners. They saw themselves as agents for change."^{cccxxxviii}

Even in extreme heat, women farmworkers wear long baggy pants, long sleeve shirts, wide brimmed hats, boots and bandanas that cover their faces. These clothes protect women from the hot sun and pesticides and make them look less feminine and attractive.

If preventative measures fail and a woman is sexually harassed or assaulted, she must then decide how to respond. Few women in Kim's study reported the abuse to authorities, despite continuous harassment, coping instead on their own by either putting up with the abuse or quitting their job.^{cccxxxix} However, many of these women felt empowered to report the incident to authorities, yet they often lacked the tools to do so.^{cccxl} Some women in the Willamette Valley, Oregon study confronted their harassers, but more frequently they left the worksite.^{cccxli} "In some cases, women workers left their jobs in search of better work environments, only to find that other fields and warehouses were no different. Women workers understood that sexual

harassment was wrong, but accepted that it came with working in the agriculture industry.^{cccxlvi} Many women farmworkers view inappropriate comments, unwanted touching, leering and sometimes even rape by supervisors and coworkers as an ordinary part of working in the fields, as merely another burden to bear.^{cccxlvi} "They believe this is what they have to go through to feed their families."^{cccxlvi} Some women in the Willamette Valley, Oregon study felt they had to go along with the harassment in order to keep their jobs after being threatened with termination for resisting and they identified poverty as a key reason for staying silent about the abuse.^{cccxlvi}

Figure 5 Women farmworkers usually wear bandanas, hats, and bulky clothing as protections against sun, pesticides, and scrutiny.

The decision of whether to report the abuse or not is based on several factors. Obstacles to reporting include fear of not being believed, fear of being blamed, fear of being ostracized at work and in her community for accusing the harasser of such terrible actions (especially if the harasser is a family friend), fear of losing her job, shame, lack of information about worker rights, lack of available support resources, language barriers and immigration status.^{cccxlvi} Immigrant women farmworkers rarely file criminal charges because, as one woman put it, "[i]t's a rule Mexicans have...never call police because they will call Immigration. If I get beaten and I call the police, then I'm beaten and deported."^{cccxlvi} Some women are afraid to tell their husbands for fear he will attack the harasser and then they both will be fired or deported.^{cccxlvi} Many women farmworkers choose not to publicly report sexual violence based on a cost-benefit analysis and instead make strategic decisions in how to respond.^{cccxlvi} Professor Runge notes that "[t]he decision not to report that a farmworker woman might make in this circumstance is legitimate, not the reflection of a weak woman, but a rational, reasonable decision in light of a rape culture that blames the victim. Reporting the sexual assaults requires challenging male hierarchy in the workplace and the family while fearing economic, social, and family retaliation."^{cccxlvi}

Cultural attitudes about sexual assault and the role of the legal system may also have a strong influence on women farmworker's coping mechanisms. "Many immigrants believe that certain issues (such as anything pertaining to sex) should be resolved within the household or community, and not in public through the involvement of law enforcement or the criminal justice system. Other victims feel unsafe disclosing an assault to anyone within the social fabric of their community."^{cccxlvi} Immigrant women farmworkers may also be skeptical that the United States legal system will provide her protection and instead view it as "an entity that will believe and protect the perpetrator."^{cccxlvi} This is particularly true if her experience in her country of origin

involved a repressive government, institutionalized gender bias, participation of police and government officials in violence against women such as trafficking or rape, or “a legal system where, as a matter of law, a husband’s sexual assault of his wife is not unlawful, where a woman’s testimony is not considered valid evidence, or her word does not have the evidentiary weight of a man’s.”^{cccliii} If she does not have access to accurate information about her rights and resources because of language and cultural barriers, her view of the United States legal system may also be shaped by the perpetrator himself.^{cccliv}

A woman farmworker’s skepticism of seeking assistance through formal channels is often further reinforced by her lack of access to and negative experiences with police and service providers in the United States.^{ccclv} Even when a woman farmworker does report sexual violence, she may face discrimination and a lack of respect from service providers and law enforcement who fail to investigate her report, discriminate against her or fail to address her cultural needs.^{ccclvi} Such systemic barriers severely impact the ways in which women farmworkers seek support.

Obstacles to reporting abuse include fear of: not being believed, being blamed, being ostracized at work and in the community for accusing the harasser (especially if a family friend), losing her job; along with shame, lack of information about worker rights, lack of available support resources, language barriers and immigration status.

SUPPORT SYSTEMS

Immigrant women farmworkers generally seek support from informal networks before turning to formal channels of social or legal assistance.^{ccclvii} This is especially true in the Latina population where strong family ties and extended networks may encourage women to turn to informal support systems first, particularly if she fears that reporting the abuse could harm her family or children because of job loss or deportation.^{ccclviii} Women farmworkers are most likely to confide in other women such as mothers, sisters and friends. However, often times the victim, the harasser, and the harasser’s wife and/or family all work in the same crew and are closely connected both at work and in the community, inhibiting the woman’s access to what would be her social support network.^{ccclix} Additionally, more recent immigrants, who may not yet know many people they can trust, have a difficult time seeking support.^{ccclx} Thus, “[u]nlike middle-class women, farmworking women may not receive the same protective factors of ‘social support’ because of economic and family responsibilities.”^{ccclxi} This lack of a support system can have serious implications for a woman’s ability to access timely medical, legal and mental health assistance.^{ccclxii}

LIMITED ACCESS TO COUNSELING AND SUPPORT SERVICES

Women may also seek formal assistance from rape and sexual violence crisis hotlines, support groups and community-based organizations.^{ccclxiii} Women farmworkers, however, often

have limited access to many of these support services as few exist in rural areas and those that do often have language and cultural barriers to providing immigrant women the services they need.^{ccclxiv} Many social service agencies serving sexual violence survivors are often not well-equipped to meet the diverse needs of immigrants, especially indigenous women, as they lack culturally and linguistically appropriate staff, materials, services and other resources.^{ccclxv} Those organizations that do have experience serving immigrant communities often lack training, experience or expertise in serving survivors of sexual assault.^{ccclxvi} This limited access to formal support services contributes to women farmworkers' extremely low rates of reporting abuse.^{ccclxvii}

FEW CONSEQUENCES FOR PERPETRATORS

Obstacles Limiting Women Farmworkers' Access to Justice

Women farmworkers face numerous obstacles to accessing justice for the sexual violence they have experienced on the job. Sexual harassment policies and training are not required in the agricultural industry by federal law.^{ccclxvii} While studies reveal that some agricultural employers have implemented sexual harassment policies and trainings, the majority of women interviewed said they did not know of any existing where they worked.^{ccclxix} Those workers who did receive training reported that they were often inadequate and that management ignored their complaints or retaliated against those who reported abuses.^{ccclxx} Women farmworkers also have limited access to the legal process and face resistance from the criminal system to investigate and prosecute sexual assault. While some remedies are available through civil litigation, very few criminal charges have been prosecuted against perpetrators of sexual violence in the agricultural industry.^{ccclxxi} Thus, with few exceptions, perpetrators get off without many consequences. Often, it is the employer company that must provide remedies or pay damages while the perpetrator may just lose his job.^{ccclxxii} However, as the former employer may not reveal the cause for termination, in many cases, perpetrators can quickly find a similar position at another farm.^{ccclxxiii}

Very few criminal charges have been prosecuted against perpetrators of sexual violence in the agricultural industry. Even if the perpetrator loses his job, he can often quickly find a similar position at another farm.

FAILURE OF EMPLOYERS TO ADDRESS SEXUAL HARASSMENT

Many agricultural employers fall short of providing their workers with adequate protections against sexual violence as they lack official policies, trainings or reporting procedures and, in many cases, retaliate against workers who complain.^{ccclxxiv} Workers in Kim's study acknowledged the importance of having responsive foremen to help prevent sexual violence in the workplace.^{ccclxxv} "Foremen who actively enforced dress codes, told harassers to stop, and partnered with workers, created a friendlier and more supportive work environment."^{ccclxxvi} However, companies that lacked commitment to worker safety and had unhealthy foremen-worker relationships enabled sexual violence to occur in the fields and warehouses.^{ccclxxvii}

Warehouse workers were more likely than field laborers to mention existing sexual harassment policies.^{ccclxxviii} For those who did receive training, it was generally delivered in Spanish, not in indigenous languages.^{ccclxxix} Employers frequently fail to translate materials and trainings into the various languages of their workers, preventing many women from learning

their rights and how to report abuse.^{ccclxxx} This is particularly poignant for indigenous workers who do not understand English or Spanish. Women interviewed in an Oregon study of indigenous farmworkers noted that “[the employers] provide the information in Spanish and they think that all [workers] speak Spanish, and they don’t care if you speak another language.”^{ccclxxxi} If the policy is only provided in writing, illiterate workers still cannot access the information even if it is written in their predominant language.^{ccclxxxii}

Women interviewed said that even when policies were in place, management often ignored their complaints, failed to investigate, refused to confront or punish the perpetrator, refused to believe the complainant or accused her of lying.^{ccclxxxiii} These responses by the employer put women at risk of more violence once the perpetrator learned he would not be punished.^{ccclxxxiv} Others faced retaliation for reporting abuse as supervisors lessened their hours, demoted their positions, assigned them more demanding tasks, continued to sexually harass them, fired them, fired their family members, terminated their employee housing, blacklisted them from jobs at other farms and turned them over to immigration authorities.^{ccclxxxv} Such actions by employers contributed to a workplace culture that not only permits sexual violence, but encourages it.^{ccclxxxvi} Faced with these obstacles, women felt discouraged from speaking up because they either did not know who to report the abuse to, thought they would not be believed or feared retaliation.^{ccclxxxvii}

Women say that even when policies are in place, management often ignores complaints, refuses to punish perpetrators, or accuses the women of lying. These responses by the employer put women even more at risk, once the perpetrator realizes he won't be punished.

LIMITED ACCESS TO LEGAL REMEDIES

Women who chose to pursue formal remedies for the sexual violence they experienced can report the abuse to their employer or law enforcement and can file a complaint with a government workplace civil rights agency such as the EEOC or state agencies. However, women farmworkers often have limited access to the legal process to fight sexual violence and exploitation in the workplace. To file a sexual harassment complaint, workers must first know that sexual harassment is against the law and what the process is to report it.^{cclxviii} However, many women are prevented from doing so because of language barriers, cultural concerns, geographic isolation and a lack of education about their rights.^{ccclxxxix} Low-income women farmworkers who make it past those barriers often face limited access to legal assistance as legal service organizations that receive federal funding from the Legal Services Corporation (LSC) are generally prohibited from representing unauthorized immigrants.^{cccxci} In many rural areas, these are the only legal service organizations that exist.^{ccxcii} Those workers who are able to file a complaint with the EEOC may find the process cumbersome and inefficient as the agency has limited resources.^{ccxcii}

Some states, such as California, have anti-discrimination statutes that give employees the right to hold perpetrators themselves individually liable for their commission of unlawful harassment, regardless of whether they are supervisors.^{ccxciii} However, this is not the case

under federal law where liability claims are filed against the employer. If the perpetrator is a coworker instead of a supervisor, the courts require a tougher legal standard for the claim against the employer to proceed to trial. In *Vance v. Ball State University*, the Supreme Court narrowly defined “supervisors” as those who can hire and fire employees, excluding many lower-level supervisors who direct daily activities.^{ccxciv} In cases where the perpetrator does not meet this definition, the plaintiff must meet an additional hurdle of proving that the employer was negligent in controlling working conditions and that the employer “knew or should have known about the conduct and failed to stop it.”^{ccxcv} The Court’s decision makes it even more difficult to seek remedies for harassment by forcing plaintiffs to meet the tougher coworker standard even for lower-level supervisors.^{ccxcvi} A recent report by the National Women’s Law Center criticizes the decision as putting “a giant roadblock in the path of workers seeking a remedy for workplace harassment. It also weakens incentives for employers to prevent and quickly respond to workplace harassment by lower-level supervisors.”^{ccxcvii} Another possible avenue for seeking justice is through private remedies under tort law such as those available under negligent hiring and negligent retention claims against the employer. These remedies can be useful for cases that do not fall under Title VII,

If a sexual harassment case makes it to court, some jurisdictions limit the remedies available for unauthorized workers.^{ccxcviii} Although Title VII applies to unauthorized immigrants, the Supreme Court’s 2002 decision in *Hoffman Plastic v. National Labor Relations Board (NLRB)*^{ccxcix} raised questions about whether they are entitled to the same remedies for workplace abuses as authorized workers are.^{cd} While the Court ruled unauthorized workers are not entitled to back pay remedies under the NLRA, several courts have declined to extend the ruling to remedies under Title VII.^{cdi} Nevertheless, *Hoffman* has had a chilling effect on unauthorized women farmworker’s access to justice. First, the ruling encourages employers to retaliate against unauthorized workers who claim violations of workplace rights. Second, it gives employers incentives to claim that unauthorized workers are not entitled to certain remedies, deterring workers from enforcing their rights. Third, *Hoffman* undermines enforcement of immigration laws by encouraging employers to hire and exploit unauthorized workers.^{cdii} “Employers’ tendency to interpret the *Hoffman* ruling broadly to allow them to request work authorization and immigration documentation in response to sexual harassment claims leaves many employees feeling that they have no effective legal avenue to pursue sexual harassment claims.”^{cdiii}

A report found that survivors of sexual assault in the US face significant barriers to justice, including police departments that fail to investigate complaints adequately.

FAILURE TO INVESTIGATE AND PROSECUTE SEXUAL ASSAULT

While many women farmworkers do not report sexual assaults to law enforcement at all, those who do contact the police often face additional obstacles to seeking justice through the criminal system.^{cdiv} A Human Rights Watch report found that “[s]urvivors of sexual assault in the US - regardless of ethnicity, occupation, or legal status - face significant barriers to justice, including police departments that fail to adequately investigate their complaints.”^{cdv} For

example, Human Rights Watch documented the failure of Illinois and Los Angeles County authorities to test rape kits.^{cdvi} Media investigations have also “uncovered serious and pervasive problems with [Philadelphia and] Baltimore police response to allegations of sexual assault, including an unusually high rate of classification of such allegations as “unfounded” (meaning the police did not believe a crime had occurred) and aggressive and rude questioning of victims by police.”^{cdvii} A woman interviewed in *Injustice On Our Plates*, a 2010 study of 150 immigrant women agricultural workers, remarked that sometimes “the officer who comes doesn’t have training in domestic violence or sexual violence. They view these women as disposable.”^{cdviii} Some police officers take advantage of individuals’ vulnerabilities by extorting money from unauthorized immigrants.^{cdix}

Even if the police do investigate allegations of sexual assault, state prosecutors may be reluctant to file criminal charges because of the difficulty in pursuing cases where there is often little evidence and few witnesses.^{cdx} Rape and sexual assault cases often come down to “he-said-she-said,” which is difficult to prosecute,^{cdxi} particularly in criminal court where the burden of proof is “beyond a reasonable doubt,” a much higher standard than what is needed in civil court.^{cdxii}

WHAT IS BEING DONE TO PREVENT SEXUAL VIOLENCE AGAINST WOMEN FARMWORKERS?

Legislators, advocates, law enforcement, farmworker women themselves, community organizations, academic institutions and growers are creating new projects to combat sexual violence in the agricultural industry. At the federal level, legislators have created avenues for relief to encourage unauthorized immigrants to report crimes such as sexual assault and have proposed bills in Congress that would amend labor laws to better protect farmworkers. Several states are also strengthening labor rights for farmworkers by passing legislation that creates stronger legal protections against sexual harassment and exploitation of workers. Some local law enforcement agencies are beginning to investigate farmworker sexual assault criminal charges and are making efforts to improve relationships with immigrants. Additionally, numerous organizations around the country are working together to improve employer standards, increase and improve sexual harassment policies and training, raise awareness of sexual violence in agriculture and educate workers about their rights.

Many organizations are working together to improve employer standards, increase sexual harassment policies and training, raise awareness of sexual violence, and educate workers about their rights.

AT THE FEDERAL LEVEL

In an attempt to encourage unauthorized immigrants to report crimes such as sexual assault and rape, Congress enacted VAWA, which created U visas for victims of certain violent crimes,^{cdxiii} and T visas for trafficking victims.^{cdxiv} These mechanisms may allow women farmworkers who report such crimes against them to gain lawful immigration status in the United States.^{cdxv} VAWA also provides two forms of relief for unauthorized immigrant battered women whose abusive spouse is a United States citizen or Lawful Permanent Resident (LPR).^{cdxvi} First, VAWA allows these women to apply for LPR status without needing sponsorship from their abusive spouse.^{cdxvii} Alternatively, VAWA allows these women to apply to have a deportation order waived and be granted LPR status.^{cdxviii}

U visas and T visas may allow women farmworkers who report certain crimes against them to gain lawful immigration status in the US.

U visas are for victims of certain violent crimes including sexual assault, rape, domestic violence and sexual exploitation.^{cdxix} However, only 10,000 visas are available each year and that cap has repeatedly been met midway through the year, leaving many who are eligible without access to this form of relief and vulnerable to deportation as a result of reporting sexual crimes.^{cdxx} Furthermore, to qualify for a U visa, an unauthorized immigrant must cooperate with law enforcement by assisting them with investigating or prosecuting the crime,^{cdxi} thus risking

deportation if the law enforcement official refuses to certify her cooperation.^{cdxxii} "More importantly, very few victims of crimes are aware of this potential remedy. Instead, they often endure horrendous abuse, believing that they have little choice."^{cdxxiii} T visas may also be available for victims of sexual violence in the workplace when the abuse is used as a form of coercion resulting in a situation of indentured servitude.^{cdxxiv}

Legislators have also recently introduced bills in Congress proposing amendments to labor laws that would better protect farmworkers. For example, the Fair Employment Protection Act was introduced on March 13, 2014.^{cdxxv} If passed, this bill would restore protections stripped away by the 5-4 decision in *Vance v. Ball* by providing for employer vicarious liability in hostile and retaliatory hostile work environments when harassment is either by individuals with authority to (a) take tangible employment actions or (b) direct daily work activities.^{cdxxvi} Another proposed bill is the Children's Act for Responsible Employment (Roybal-Allard bill) which was introduced in the House on June 12, 2013. Although family farms would still be exempt, this bill attempts to amend the FLSA to repeal agricultural exemptions for minimum age restrictions in the workforce.^{cdxxvii}

AT THE STATE LEVEL

Several states have enacted legislation to strengthen labor rights for farmworkers and create stronger legal protections against sexual harassment and exploitation of workers. For example, states such as California, Oregon and Washington include farmworkers in state wage and hour protections going beyond the minimal federal requirements.^{cdxxviii} Iowa and Nebraska created state agencies to advocate for the rights of immigrant residents and enacted immigrant worker protection legislation to increase the responsibilities of meatpacking plants to provide workers with information about their legal rights and to increase workers' access to social services by employing bilingual individuals to refer workers to community services.^{cdxxix}

California, Connecticut and Maine have instituted laws requiring sexual harassment training for supervisors.^{cdxxx} California also requires employers to create anti-harassment policies and provide information on those policies to all employees.^{cdxxxi} Provisions of California's collective bargaining law, the Agricultural Labor Relations Act (ALRA), recognize the unique dynamics of the agricultural industry by allowing ALRA agents to talk to workers in the fields without the employer being present and by excluding farm labor contractors from the definition of "employers" so that the grower, and not the contractor, is responsible for unfair labor practices committed by a contractor.^{cdxxxii} Most recently, a California Assembly committee passed SB-1087 on June 30, 2014 to amend sections of the Labor Code relating to farm labor contractors.^{cdxxxiii} The proposed legislation increases accountability of farm labor contractors who supply workers to growers by revoking a contractor's license if he hires a supervisor who has been found guilty of sexual harassment or sexual assault at another workplace in the past 3 years.^{cdxxxiv} The bill also requires all

Several states have enacted legislation to strengthen labor rights and create stronger legal protections against sexual harassment.

employees to take sexual harassment prevention training and adds questions to the California contractor licensing exam on sexual harassment regulations.^{cdxxv}

Maryland also introduced a new bill in early 2014 called the Fair Employment Preservation Act.^{cdxxxvi} This bill would amend Maryland's nondiscrimination law, specifying employers' vicarious liability for harassment by individuals with authority to take tangible employment actions as well as those who direct daily work activities.^{cdxxxvii} Additionally, Illinois and Oregon passed legislation prohibiting discrimination against sexual assault victims.^{cdxxxviii}

Significantly, a growing number of states and counties are also ending or limiting their cooperation with immigration authorities under the 287(g) and Secure Communities programs,^{cdxxxix} which allow local law enforcement officials to check the immigration status of arrested individuals, detain unauthorized immigrants and turn them over to federal immigration authorities.^{cdxl} Many of these decisions were in response to federal court cases finding that local law enforcement officials violated the Fourth Amendment rights of individuals by holding them in detention for immigration authorities without probable cause.^{cdxli} These programs created much distrust of police in immigrant communities and deterred women farmworkers from reporting sexual assaults.

EFFORTS BY LAW ENFORCEMENT

Some police departments are beginning to investigate farmworker sexual assault criminal charges, expanding the possible remedies for women farmworkers. The Monterey County, California Sheriff's Office investigated its first farmworker sexual assault case in 2013^{cdxlii} and two recent California cases have resulted in criminal prosecutions against defendants who sexually assaulted farmworkers.^{cdxliii}

Some local law enforcement agencies are also making efforts to improve relationships with immigrants. For example, the Monterey County district attorney's office in California is working with the sheriff's office to raise awareness of the U visa program and invited Lideres Campesinas, a women's farmworker organization, to join its task force on sexual harassment and domestic violence.^{cdxiv} In addition, while many police departments call Border Patrol or ICE when they need a translator, departments like Sheriff John York's in Livingston County in western New York rely instead on volunteer interpreters from the community and work with advocates to build trust in an attempt to encourage immigrants to report incidents of sexual assault.^{cdxlv}

ACTION BY ORGANIZATIONS AND WOMEN FARMWORKERS THEMSELVES

Organizations around the country are working to combat sexual violence in the agricultural industry by improving employer standards, increasing and improving sexual

harassment policies and training, raising awareness of sexual violence in agriculture and educating workers about their rights. Farmworker women themselves created several of these organizations, such as Lideres Campesinas, and have used grassroots organizing to develop leadership among themselves and combat the widespread sexual violence they face.^{cdxlv} Recent landmark cases raised growers' awareness of the issue and increased their interest in accessing sexual harassment prevention training.^{cdxlvii} The EEOC and legal service organizations have also negotiated with employers, as part of the settlement of their lawsuits, for improved sexual harassment policies and practices in their workplaces.

The Coalition of Immokalee Workers (CIW) Fair Foods Program in the Florida tomato industry has created an innovative nonlitigious approach to tackling sexual violence in the fields. The Fair Foods Standards Council (FFSC) implements and monitors CIW's Code of Conduct which requires Florida growers participating in the Fair Foods Program "to agree to a set of standards for their workers, including a right to work free from sexual harassment, and to earn a fair wage."^{cdxlviii} Growers that join the program must provide sexual harassment training and undergo regular external audits.^{cdlxix} The program officially began in January 2011 after 90 percent of tomato growers in Florida had signed on.^{cdl} Whole Foods, Trader Joe's and most recently, Walmart, have joined.^{cdli} Before Walmart joined, the Fair Foods Program covered less than 5 percent of farmworkers nationwide.^{cdlii} However, Walmart, which sells 20 percent of the nation's fresh tomatoes year-round, has pledged to expand the program's standards to its tomato suppliers in several other states beyond Florida and also hopes to apply the standards to its Michigan and Washington apple orchards and its strawberry fields in numerous states.^{cdliii}

FFSC hires monitors to conduct announced and unannounced audits of farms to monitor their compliance with the Fair Foods Program Code of Conduct.^{cdliv} The audits involve intensive worker interviews, an assessment of whether the company has systems in place to comply with the Code of Conduct and whether they are being implemented.^{cdlv} Violators are given an opportunity to correct violations and are suspended from the program if they fail to resolve them.^{cdlvi} Employees found by the council to have committed sexual harassment involving physical contact must be fired immediately and cannot work at any Fair Food farm for at least two seasons with a second offense resulting in a lifetime ban.^{cdlvii} While litigation continues to be a way for women farmworkers to stand up against employer misconduct, it can be a long and difficult process. The Fair Foods Program in Florida is an example of how nonlitigious workers' rights initiatives can lead to more immediate responses and attempt to systemically improve conditions for farmworkers.^{cdlviii}

Other organizations have also focused on increasing and improving employer's sexual harassment policies and trainings for supervisors and employees. Some companies have made improvements after facing litigation. For example, after National Food Corporation settled with the EEOC in 2013, the company agreed to change its complaint procedures, institute sexual harassment training for management, apologize to the plaintiffs and not rehire the perpetrator.^{cdlix} Farmworker organizations and regulatory agencies have collaborated to expand training programs and increase educational efforts on sexual violence in the agricultural industry.^{cdlx} The EEOC, for instance, has made the harassment issues of immigrant and vulnerable workers, such as farmworkers, a top priority of its Strategic Enforcement Plan, which

was adopted in December 2012.^{cdlxii} The agency provides trainings to workers and employers on sexual harassment issues and laws^{cdlxii} and collaborates with migrant women farmworker organizations such as the Esperanza Project of the Southern Poverty Law Center, California Rural Legal Assistance and Lideres Campesinas to confront sexual violence in the workplace.^{cdlxiii} Successful EEOC sexual harassment cases have resulted when the agency collaborates with community organizations, gains trust of the community, uses bilingual counselors, refuses to inquire about immigration status and undertakes training in how culture and gender affect credibility.^{cdlxiv} The agency recognizes that although sexual harassment in agriculture involves sex discrimination, it is also based on race, national origin and immigration status and requires solutions that take all these factors into account.^{cdlxv}

Another organizational strategy has been to increase public awareness of the issue and expand know-your-rights campaigns. Frontline aired the documentary *Rape in the Fields* in June 2013, shining a national spotlight on the issue of sexual violence in the agricultural industry.^{cdlxvi} The documentary has also been used by the EEOC to train its investigators and agricultural employers on how sexual harassment could play out in agricultural settings.^{cdlxvii} As part of this yearlong reporting collaboration with FRONTLINE, Univision and the Investigative Reporting Program at the UC Berkeley Graduate School of Journalism, the Center for Investigative Reporting created a database of the sexual harassment lawsuits filed in federal court by the EEOC, published numerous news articles about their findings and continued to highlight the issue in the media.^{cdlxviii}

Organizations conduct know-your-rights campaigns by sending advocates into the fields, labor camps and farmworker communities to educate farmworkers about sexual violence and their rights. A creative approach has been to include this information in Spanish *radionovela* soap operas to access a wider audience.^{cdlxix} Support service organizations for sexual assault and domestic violence survivors have worked with growers to allow their staff to visit women directly in the fields in order to train them on how to identify and report abuse.^{cdlxvii} These organizations have also organized sexual violence prevention workshops at farm labor camps and farmworker housing to reach community members in an attempt to change social norms that tolerate sexual violence.^{cdlxxi} Additionally, numerous organizations have created training materials for regulating agencies, legal providers, law enforcement, social service providers and religious advisors on the complex issues facing women farmworkers who experience sexual violence in the workplace and how to best assist them.^{cdlxii}

Organizations conduct know-your-rights campaigns by sending advocates into the fields, labor camps, and farmworker communities to educate women about sexual violence and their rights.

CONCLUSION

The studies reviewed in this report, dating from 1989 to 2014, demonstrate that sexual violence of women farmworkers is recognized as a widespread and longstanding problem in the agricultural industry that needs to be addressed. While sexual harassment in the workplace has been studied extensively, far less attention has been given to the issue as it applies to women farmworkers in the United States whose circumstances differ greatly from the white middle-class focus of most sexual harassment literature. The studies in this report examine the aspects of the agricultural industry and the social and cultural dynamics of the farmworker population that heighten the risk of sexual violence in the workplace and create unique obstacles for women farmworkers to report and seek support and remedies for abuse. However, a significant challenge to addressing the issue is the difficulty in gathering data about the scope of the problem as traditional research methods are ineffective for this population. Without reliable figures, determining the prevalence of sexual violence in agriculture is complex. The lack of adequate data hides farmworkers from public attention and makes it difficult to raise awareness about the serious workplace sexual violence problems these women face.^{cdlxviii}

^{vi} The main national surveys that collect data on agricultural farmworkers are the National Agricultural Workers Survey (NAWS), the United States Department of Agriculture's (USDA) Census of Agriculture (Census), the USDA's National Agricultural Statistics Survey (NSSS) and the Bureau of Labor Statistics Current Population Study (CPS). Each survey has significant limitations such as the underestimation of farmworkers due to the exclusion of small farms, counting jobs instead of workers when two or three workers may fill one job, and the unlikely inclusion of the largely unauthorized worker population from official data. In addition, agricultural employers are dis-incentivized to report accurate labor information as they want to avoid bringing attention to illegal employment arrangements or unsafe workplace practices. Some federal agencies collect information on regulatory and enforcement practices, however this information is usually not easily accessed. States collect and publish information through their regulatory programs and departments, but the information is often specific to that state's unique regulations, reporting criteria and definitions, making it difficult to compare data between states. Farmworker organizations and academics have also contributed to the data collection, however these studies are often limited as well. Most importantly, no federal agency tracks the number of sexual harassment incidents in agriculture. For more information on the limitations of these surveys, see Bon Appetit Management Company Foundation and United Farm Workers, *Inventory of Farmworker Issues and Protections in the United States* (March 2011) available at http://www.ufw.org/pdf/farmworkerinventory_0401_2011.pdf; Maria M. Dominguez, "Sex Discrimination & Sexual Harassment In Agricultural Labor," *Journal of Gender & The Law* 6 (1997): 231-259.
