Project 4

1. Shallow lakes have higher levels of arsenic in their water column.
2. Plankton from shallow lakes have higher levels of arsenic than plankton from deeper lakes.
3. Levels of periphyton have higher levels of arsenic than aquatic plants to which they are attached.
4. Lab develops new low cost method for sampling periphyton.
5. Replication
6. Engagement with Lake Associations
7. Engagement with regulatory agencies
