ENVH 462/562A: Technical Aspects of Occupational Safety

Quarter: Spring 2019  
Credits & Grading: 3 credits, graded  
Time: Tuesdays, 10:30 to 1:20 PM  
Location: SOCC 303

Graduate students (ENVH 562) will have an additional safety research project to develop an Accident Prevention Program (Safety Manual) for a selected industry.

Instructor: Rick Gleason, MSPH, CIH, CSP  
Direct Phone Number (206) 856-6660  
rgleason@uw.edu

(Office Hours by appointment)

Required Texts:  
None: All information will be provided online

Lecture Date            Topic

1 Tues.  4/2          Intro. OSHA Act, Safety Programs, Construction Hazards, Inspections. Temporary Labor Workers

2 Tues.  4/9          OSHA Focus Four Presentations Falls, Struck-By (Heavy Equipment), Caught In Trenches and Electrocution

3 Tues.  4/16         Health Hazards in Construction, Silica, Asbestos, Lead, Hazcom GHS
4 Tues.  4/23  Respiratory Protection, Noise, BBP
        Permit Required Confined Spaces

5 Tues.  4/30  Welding Safety, Fire Safety Safety
        PPE - Safety Glasses  Emergency Washing

6 Tues.  5/7  Stairways, Ladders, Scaffolds Fall Protection-Full Body Harnesses

7 Tues.  5/14  Crane Safety, Material Handling, Forklifts, Rigging

8 Tues.  5/21  Power Tools, Night Operations, Working Alone, Heavy
        Equipment

9 Tues.  5/28  Demolition, Aerial Lifts, Ergonomics,
        Last day of class  Take Home Final Due by June 4

Grading:

Undergraduate ENVH 462 grades are based on a midterm (20%), final (20%), a Class presentation on a
Safety and Health topic, (25%). Homework and class participation will cover 35%. The grades of the
graduate students in ENVH 562 will determined similar to the above Grades are based on a midterm (20%),
final (20%), a Class presentation on a Safety and Health topic, (25%). Homework and class participation and
the final Company Safety Manual Write Up (35%).

Disabilities -- If you would like to request academic accommodations due to a disability, please contact
Disabled Student Services, 448 Schmitz, 543-8924 (V/TDD). If you have a letter from Disabled Student
Services indicating you have a disability that requires academic accommodations, please present the letter to
me so we can discuss the accommodations you might need for class.

• Academic Integrity Statement - Students at the University of Washington (UW) are expected to maintain
  the highest standards of academic conduct, professional honesty, and personal integrity.
  The UW School of Public Health (SPH) is committed to upholding standards of academic integrity
  consistent with the academic and professional communities of which it is a part. Plagiarism, cheating, and
  other misconduct are serious violations of the University of Washington Student Conduct Code (WAC 478-
  120). We expect you to know and follow the university’s policies on cheating and plagiarism, and the SPH
**Academic Integrity Policy**  [http://sph.washington.edu/students/academicintegrity/]. Any suspected cases of academic misconduct will be handled according to University of Washington regulations. For more information, see the University of Washington Community Standards and Student Conduct website.

**ENVH 462 /562 Course Objectives:**

**Learning Objectives:**

1. Identify who is covered by OSHA and WISHA and who is not, the purposes of the OSHA Act, state plans, and how administrative responsibilities are split within the federal government.

2. Differentiate between coverage under different sets of OSHA Standards: General Industry, Construction, Agriculture and Maritime Standards. This course will focus on the construction industry.

3. List the employer's principal duty under OSHA to comply with occupational safety and health standards.

4. Distinguish between national consensus standards and established federal standards.

5. Differentiate between specification and performance standards.

6. Recognize the employer's obligation to comply with general duty obligations and understand the significance of a recognized hazard.

7. Identify the role of employees in complying with standards and their ability to trigger inspections, as well as their role in the conduct of inspections.

8. Recognize the limited nature of the employee's role in enforcement proceedings initiated before the OSHA Review Commission.

9. Define current OSHA inspection and enforcement priorities, including OSHA special emphasis programs such as amputations and those in the petrochemical industries.

10. List special considerations that prompt inspections, such as lockout/tagout and accidents resulting in fatalities.

11. List the various categories of civil and criminal violations, as well as the penalties that can be assessed.

12. Identify OSHA's compliance directive for assessing these penalties as well as the “egregious” citation policy.

13. Recognize the liability of employers and managers, from operations staff, superintendents and up to the CEO.

14. Locate and apply OSHA and WISHA safety and health standards, policies, and procedures.

15. Utilize standards and regulations to supplement an ongoing safety and health program.

16. Identify common violations of standards and propose corrective actions.

17. Describe appropriate abatement procedures for selected safety and health hazards in construction such as lead, silica and asbestos.
18. Conduct occupational safety and health training for workers from regulations

19. Identify common hazards of occupational injury and illness in a general industrial environment

20. Students will be able to conduct an on-site safety and health audit and report identifying hazards and corrections

21. Distinguish between permit-required and non-permit-required confined space.

22. Identify the techniques of testing for hazardous atmosphere, how to use the buddy system and the elements of emergency rescue.

23. Identify the PPE Standard requirements for a hazard assessment, equipment selection, and employee training.

25. List the requirements for forklifts and powered industrial truck operations.

26. Review the top four hazards on construction sites, falls, electrical, struck by and caught in accidents.

27. Define standards for controlling noise exposure and hearing loss, and ventilation for abrasive blasting, grinding tools on construction sites.

28. Identify how to use these standards to set design codes for new equipment, and what criteria to use to determine if existing installations meet current standards.

29. Address the requirements for fire extinguishers, hazard classifications, training and inspections, fire brigades, training equipment, and registration.

30. List OSHA's construction flammable storage requirements and identify if a facility is properly equipped to comply with these requirements

ENVH 562 Technical Aspects of Safety

Each student will pick a topic and present a 15 minute presentation of the OSHA regulations pertaining to that section. Handouts should be prepared and distributed to the class on the day of the presentation. A short quiz should be prepared with approximately 3 questions from your presentation. Please have enough copies so students can take the quiz at the end of your class. You should strive for approximately 15 powerpoint slides for the 15 minute presentation. Please include yourself in at least two of the slides. The possible topics could include:

Chemical Hazard Communication, MSDS's (OSHA's Global Harmonization Standard)

Hearing Protection

Respiratory Protection

Emergencies, Means of Egress

Fire Protection
