

# W ENVIRONMENTAL & OCCUPATIONAL HEALTH SCIENCES

UNIVERSITY of WASHINGTON | SCHOOL OF PUBLIC HEALTH

(<https://deohs.washington.edu/>)

---

**Quarter:** Spring 2022

**Credits & Grading:** 3 credits, graded

**Time:** Mondays & Wednesdays, 8:30 to 12:20 PM

**Location:** HSB T-568-574

---

## Instructors:

**Chris Simpson, Professor**

**Office:** Roo 2336

**Email:** [simpson1@uw.edu](mailto:simpson1@uw.edu) (<mailto:simpson1@uw.edu>)

**Phone:** 206-543-3222

(<mailto:tmb@uw.edu>) **Office Hours:** By appointment

**Mariah Dittmore, TA**

**Email:** [mmhd@uw.edu](mailto:mmhd@uw.edu) (<mailto:mmhd@uw.edu>)

(<mailto:tmb@uw.edu>)

**Sierra Brown, TA**

**Email:** [browns32@uw.edu](mailto:browns32@uw.edu) (<mailto:browns32@uw.edu>)

(<mailto:tmb@uw.edu>)

## COVID-related expectations

Per UW policy, this class will be conducted in person. Since this is a hands-on laboratory class, we are unable to offer a remote option for taking this class. Therefore, you should only register for this class if you can attend in person.

All UW students are expected to complete their [vaccine attestation](#) (<https://www.washington.edu/coronavirus/vaccination-requirement/>) before arriving on campus. **Per President Cauce's message March 8**, ([https://www.washington.edu/coronavirus/2022/03/08/spring-quarter-classes-and-uw-mask-policies-message-to-uw-students/?utm\\_source=uwhp&utm\\_medium=tiles&utm\\_campaign=spring-quarter](https://www.washington.edu/coronavirus/2022/03/08/spring-quarter-classes-and-uw-mask-policies-message-to-uw-students/?utm_source=uwhp&utm_medium=tiles&utm_campaign=spring-quarter)) following changes to state and local health policies, masks will become optional inside most University facilities starting March 28, the first day of spring quarter. Masks will continue to be required in clinical and other health-care settings and on public transportation, including UW shuttles. **However, we strongly encourage you to continue wearing masks in class, because you will be working in close proximity to your fellow students and the instructors, and social distancing will not be possible in the laboratory.** Please monitor yourself daily for symptoms and stay home if you are sick. It's also strongly recommended to get tested after travel. Refer to the [UW Face Covering Policy](#) ([https://www.ehs.washington.edu/covid-19-prevention-and-response/face-covering-requirements?\\_ga=2.102791810.305611696.1646677337-2095419026.1632253748](https://www.ehs.washington.edu/covid-19-prevention-and-response/face-covering-requirements?_ga=2.102791810.305611696.1646677337-2095419026.1632253748)) for the latest guidance and follow the campus-wide face-covering policy at all times. You are expected to follow state, local, and UW COVID-19 policies and recommendations. If you feel ill or exhibit possible COVID symptoms, you should not come to class. If you need to temporarily quarantine or isolate per CDC guidance and/or [campus policy](#) ([https://www.washington.edu/coronavirus/2022/03/08/spring-quarter-classes-and-uw-mask-policies-message-to-uw-students/?utm\\_source=uwhp&utm\\_medium=tiles&utm\\_campaign=spring-quarter](https://www.washington.edu/coronavirus/2022/03/08/spring-quarter-classes-and-uw-mask-policies-message-to-uw-students/?utm_source=uwhp&utm_medium=tiles&utm_campaign=spring-quarter)), you are responsible for notifying your instructors as soon as possible by email. **If you receive a positive COVID-19 test result, you must report to campus Environmental Health & Safety (EH&S) by emailing [covidehc@uw.edu](mailto:covidehc@uw.edu) (<mailto:covidehc@uw.edu>) or calling 206-616-3344.**

**Please check your email daily BEFORE coming to class.** If we need to cancel a class session because the instructor or a guest speaker is complying with UW policies and unable to attend in person, we will send all registered students an email announcing the cancellation, and outlining a plan to catch-up on any cancelled sessions.

## Course Description

This laboratory-based course covers the detection, sampling and analysis techniques for measuring contaminant concentrations and exposures in occupational settings and the ambient environment.

The course emphasizes sampling and measurement techniques primarily for airborne exposures to particulate matter and chemical agents, and provide hands-on experience with a variety of common direct reading instruments, and integrated sampling devices followed by subsequent off-line chemical analysis. The laboratory experiments are intended to simulate typical workplace and environmental measurement situations and to provide a basis for the selection of sampling and analytical techniques and for the critical evaluation of the laboratory results.

**In compliance with State of Washington health and safety regulations, No food or drinks are allowed in the classroom.**

## Content

- Calibration of airflow measuring devices
- Aerosol sampling using filter samplers, cyclones and cascade impactors. Aerosol analysis using gravimetric and real-time methods.
- Direct measurement techniques for gases and vapors: Detector tubes and direct reading instruments.
- Infra red spectroscopy: non-dispersive carbon dioxide monitor and the dispersive MIRAN instrument for the measurement of single compounds and the evaluation of mixtures in air.
- Adsorption sampling for organic gases using charcoal tube and badge samplers and analysis by gas chromatography.
- Sampling for ultrafine PM and Black Carbon using direct reading instruments.
- Atomic absorption and x-ray fluorescence spectroscopies for analysis of metals in airborne particles and surface samples.

### **Course Learning objectives**

At the end of this course, students should be able to accomplish the following:

1. Identify literature sources of standard methods for measurement of occupational exposures to chemical contaminants
2. Identify the advantages and the limitations inherent in a variety of techniques and instruments used for industrial hygiene measurements, and what specific factors in the sampling situation might prevent accurate application of that approach.
3. Describe a framework for selection of appropriate methods for measurements of specific workplace contaminants.
4. Demonstrate knowledge of the operating principles of several kinds of contemporary field meters for chemical agents. Demonstrate proficiency in the use of these devices.
5. Demonstrate knowledge of the operating principles, advantages and limitations of several kinds of major laboratory instruments commonly used for chemical analysis, including: FTIR, UV/visible absorption spectrometers, gas chromatographs, atomic absorption spectrometers. Demonstrate proficiency in the operation of these devices.
6. Apply basic concepts in quality control and quality assurance for chemical measurement data.
7. Critically evaluate the reliability of chemical measurement data.
8. Express and interpret the chemical measurement results in terms that are applicable to occupational or environmental standards and situations.
9. Demonstrate competency in technical writing.
10. Demonstrate the ability to work effectively, co-operatively, and safely as part of a team.

### **Responsibilities**

The student responsibilities for the course are the following:

1. Prepare in advance of each lab period. Read/understand each experiment and assigned readings before class. Complete all necessary calculations for adequate sampling times, for preparation of standard solutions, and for dilution schemes to provide appropriate concentrations.
2. Maintain and submit a lab report on each experiment. These reports are due one week after the completion of each laboratory experiment unless otherwise announced.

You will work in small groups for most of the experiments. However, each student is responsible for taking part in all phases of each experiment and for preparing and submitting a report of their lab results and findings.

## **Class organization**

Refer to the class schedule. The course consists of laboratory sessions twice a week.

## **Grading**

100% of your grade will be based on the lab reports

## **Guidelines for Preparation of Lab Reports**

All students will be required to submit an individual lab report for each lab. Students are encouraged to actively participate in all aspects of generating the data in the laboratory to better learn and understand all of the principles and procedures. This is essential in order to be able to independently carry out such surveys and make the required reports in the future. Data should be kept in bound laboratory notebooks to prevent loss or compromise.

In general, lab reports should follow this outline:

Experimental Objectives - In one paragraph, state the major aims of the lab.

Methods - List the citation for the methods and/or references used, serial numbers of the equipment utilized, and any procedural modifications. Do not re-write the manual. Also provide the calculations and the schemes for standards preparation and dilutions. Reviewers cannot help troubleshoot errors without verification of standards and any questionable data. **The Objectives and Methods sections typically should not exceed 2 pages combined.**

Results - Provide all sample data, standards data, and regression data with appropriate curves. Show precision of replicates and coefficient of variation for the method. Also give worked examples of all your calculations, equations and formulas, especially when serial calculations are calculated by spreadsheet. Listing numeric results of calculations, without showing the equation used to arrive at the result, will be deducted points on the assignment. Copies of computer printouts or integrator data plots, should be accompanied by a listing of the formulas, constants and factors. If you are not

familiar with appropriate numbers of significant digits when reporting numbers, please read this:

[Significant Figures.pdf \(https://canvas.uw.edu/courses/1545889/files/88068762/download?wrap=1\)](https://canvas.uw.edu/courses/1545889/files/88068762/download?wrap=1)

**Discussion** - Compare your observed vs. expected results where appropriate. Include any information of variables, which might have spuriously affected your results. Speculate as to the reasons your results may differ from theoretical. Address recovery problems, analytical errors, and uncertainties.

**Conclusions** - The conclusion section of the reports should provide not only your evaluation of the method and the validity of your data, but should also address the relation of the measured levels of contaminants to those of standards such as TLVs or PELs. The optimum length of the Discussion and Conclusion Sections should be but is not limited to 1 page each. Provide summary tables of all major results.

**Questions** – Specific questions may be included in the lab guide. These questions can be answered at an appropriate place in the report, such as the results, discussion or conclusion sections (clearly identify the question/answer using bold font).

**Grading:** The reports will be graded on the accuracy and precision of the results, the application of the techniques, the validity of the conclusions, the investigation and explanations of errors. The reports should be typed or word processed, and must be neat, legible and organized. Grades can be adversely affected by data that cannot be readily found and/or recognized because of poor organization of the report.

## **Textbook and Readings**

Refer to the [Modules \(https://canvas.uw.edu/courses/1545889/modules\)](https://canvas.uw.edu/courses/1545889/modules) page for specific readings for each of the labs

## **Textbook and Readings**

Refer to the [Week 1 module \(https://canvas.uw.edu/courses/1545889/modules\)](https://canvas.uw.edu/courses/1545889/modules) page for information about lab safety

## **SCHEDULE**

See the [Syllabus \(https://canvas.uw.edu/courses/1545889/assignments/syllabus\)](https://canvas.uw.edu/courses/1545889/assignments/syllabus) for calendar of labs and assignments.

See the [Modules \(https://canvas.uw.edu/courses/1545889/modules\)](https://canvas.uw.edu/courses/1545889/modules) for each week's lab instructions.

## **Access & Accommodations**

Your experience in this class is important to me. It is the policy and practice of the University of Washington to create inclusive and accessible learning environments consistent with federal and state law. If you have already established accommodations with Disability Resources for Students (DRS), please activate your accommodations via myDRS so we can discuss how they will be implemented in this course.

If you have not yet established services through DRS, but have a temporary health condition or permanent disability that requires accommodations (conditions include but not limited to; mental health, attention-related, learning, vision, hearing, physical or health impacts), contact DRS directly to set up an Access Plan. DRS facilitates the interactive process that establishes reasonable accommodations. Contact DRS at [disability.uw.edu](mailto:disability.uw.edu).

## Religious Accommodations

Washington state law requires that UW develop a policy for accommodation of student absences or significant hardship due to reasons of faith or conscience, or for organized religious activities. The UW's policy, including more information about how to request an accommodation, is available at [Religious Accommodations Policy \(https://registrar.washington.edu/staffandfaculty/religious-accommodations-policy/\)](https://registrar.washington.edu/staffandfaculty/religious-accommodations-policy/) (<https://registrar.washington.edu/staffandfaculty/religious-accommodations-policy/>) (<https://registrar.washington.edu/staffandfaculty/religious-accommodations-policy/>). Accommodations must be requested within the first two weeks of this course using the [Religious Accommodations Request \(https://registrar.washington.edu/students/religious-accommodations-request/\)](https://registrar.washington.edu/students/religious-accommodations-request/) form (<https://registrar.washington.edu/students/religious-accommodations-request/>) (<https://registrar.washington.edu/students/religious-accommodations-request/>).

## Academic Integrity

Students at the University of Washington (UW) are expected to maintain the highest standards of academic conduct, professional honesty, and personal integrity.

The UW School of Public Health (SPH) is committed to upholding standards of academic integrity consistent with the academic and professional communities of which it is a part. Plagiarism, cheating, and other misconduct are serious violations of [the University of Washington Student Conduct Code \(https://www.washington.edu/studentconduct/\)](https://www.washington.edu/studentconduct/) (WAC 478-120). We expect you to know and follow the university's policies on cheating and plagiarism, and [the SPH Academic Integrity Policy \(https://sph.washington.edu/students/academic-integrity-policy/\)](https://sph.washington.edu/students/academic-integrity-policy/). Any suspected cases of academic misconduct will be handled according to University of Washington regulations. For more information, see the University of Washington Community Standards and Student Conduct website.
